5. Methodological explanations

This publication presents the results of a sample survey "The level of public confidence in law enforcement agencies."

The survey involved 18,005 randomly selected households, or 0.35% of the total number of households in the country. In the sample survey, one household member aged 15-80 years.

The purpose of the survey is to obtain representative data on the level of public confidence in law enforcement agencies, on the perception of their own safety and subjective assessment of the level of crime, as well as obtaining information about offenses.

The survey is carried out by questioning the population and recording information in a statistical form. The survey is carried out by conducting interviews by specially trained interviewers by visiting households.

The statistical form of the survey contains the following sections:

- information about the respondent;

- perception of one's own safety and subjective assessment of the level of crime;

Survey indicators are given for the entire population.

In some cases, minor discrepancies between the total and the sum of terms are explained by automatic rounding of data.
