1. Key points

In January 2024 the industrial production index (hereinafter the IIP) in Kazakhstan amounted to 103.4%.

Production growth is observed in the mining industry and quarrying by 0.2%, manufacturing industry – by 6.9%, supply of electricity, gas, steam, hot water and air conditioning – by 2.5%, water supply; water disposal; collection, treatment and disposal of waste, activities for the elimination of pollution - by 4.8%.

Among the regions, the largest growth was recorded in Akmola, Aktobe, Shygyz Kazakhstan regions.

2. Main indicators of industry performance

In January 2024, industrial products were produced in the amount of 3746.7 billion tenge, of which in the mining industry - by 1847.4 billion tenge (49.3% of the total volume), in the manufacturing industry - by 1564.4 billion tenge (41.3%).

Industrial production indices

Dynamic tables:

[Volume of industrial production by type of economic activity by regions](#)

Indices of industrial production by types of activity

in percent

	January December 2023 by 2022	January 2024 To	
		December 2023	January 2023
Industry	104.3	86.8	103.4
Mining and quarrying	104.6	91.1	100.2
Manufacturing industry	104.1	76.9	106.9
Supply of electricity, gas, steam, hot water and air conditioning	101.8	110.4	102.5
Water supply; water disposal; collection, treatment and disposal of waste, activities for the elimination of pollution	101.9	88.7	104.8

In the mining industry and quarrying in January 2024 the IIP was 100.2%, due to an increase in the production of metal ores (106.1%) and other minerals (103.3%).

In the manufacturing industry, the IIP in January 2024 compared to January 2023 106.9%, The growth was recorded in the production of chemical industry products – by 39.9%, metallurgical - by 12.2%, finished metal products, except machinery and equipment – by 18.1%, mechanical engineering - by 17.7%.

In the supply of electricity, gas, steam, hot water and air conditioning the IIP amounted to 102.5% due to an increase in the production, transmission and distribution of electricity by 5.6%.

In water supply; water disposal; collection, treatment and disposal of waste, activities to eliminate pollution the IIP in January 2024 amounted to 104.8%. Collection, treatment of waste water by 5.9%, collection, processing and disposal of waste, recycling (rescovery) of materials – 7.3%.

An increase in production volumes was recorded in 11 regions of the republic, a decrease is observed in Almaty, Atyrau, Zhambyl, Zhetisu, Mangystau, Soltustik Kazakhstan, Turkistan regions, Almaty and Shymkent city.

Industrial production index

as a percent of the corresponding period of the previous year. increase +. decrease -

Spreadsheets:

[The volume and indices of industrial production by type of activity in January 2024](#)

[The volume of products \(goods, services\) in the whole industry by regions in January 2024](#)

[Industrial output in physical terms in January 2024](#)

3. Glossary

The volume of industrial production in value terms is the cost of all finished products (products) produced by the enterprise, semi-finished products of its production (both from its own raw materials and materials, and from raw materials and materials of the customer), intended for sale to the side, its capital construction and its non-industrial divisions, issuing to its employees on account of wages, as well as works and services of an industrial nature, performed on orders.

The volume of industrial production in physical terms is the output of specific types of products in physical terms. The volume of industrial production in physical terms is taken into account in terms of gross output, including products spent on industrial and production needs within a given enterprise and produced from raw materials supplied by the customer.

The index of industrial production is a relative indicator that characterizes the change in the volume of industrial production in the periods being compared.

4. Methodological notes

The information base for the formation of indicators of industrial products (goods, services) is the primary data of nationwide statistical observations of industrial enterprises, enterprises with a secondary activity of "Industry", individual entrepreneurs, peasant or farm enterprises.

To calculate the index of industrial production, a method is used based on the dynamics of physical indicators for an established set (basket) of representative goods, followed by a step-by-step aggregation of individual (commodity) indices into indices by types of economic activity. Indices for large populations are calculated as a weighted average of the constituent elements of these populations.
