### 3. Glossary

Retail trade - resale (sale without processing) of new and used goods to the public for personal consumption, home use or disposal.

Wholesale trade - resale (sale without processing) of new and used goods to retailers, industrial, commercial, institutional or professional users or other wholesalers, as well as persons acting as agents or brokers when purchasing goods on behalf of such persons or companies or selling goods to them.

Index of the physical volume - a relative indicator that characterizes the change in the volume of sales of commodity mass (quantitative factor of commodity turnover) in the current period compared to the base one.

Commodity stocks - the amount of goods in cash or in kind, located in trading enterprises, in warehouses, in transit on a certain date.

### 4. Methodological explanation

The volume of sales of goods and services characterizes the amount of cash proceeds received for the sold goods, products and services rendered for cash and non-cash payments.

The index of the physical volume of turnover shows how the turnover changes as a result of changes only in its physical volume, excluding the influence of price changes.

To calculate the index of the physical volume of sales of goods (services), the turnovers of the reporting and base periods are compared in the prices of the same period taken as the base period (in constant prices).
