Conventional symbols:

- - no phenomenon

0,0 - a small amount

... - no data

x - confidential data

In particular cases the small discrepancies between total and the sum of summation can be explained by rounding of data.

Foreword

«Living standards in Kazakhstan» statistical compilation contains information about the main social and economic indicators of living standards for 1995-2019 (section 1). Data of the last five years covers the following topical sections of the compilation (2015-2019).

The compilation comprises tabular data on social and economic condition of Kazakhstan population and statistic data on population income and income inequality, social welfare and benefits. A row of indexes is given by regional breakdown.

The previous published data has been recalculated and adjusted by selected indicators. Some statistic data for 2019 is preparatory and can be amended in the further publications.

Data on current statistical statement and sampleing survey is used in compilation development.

Common international approach is used in order to avoid the discrepancy in calculation of national indexes.

The compilation is designed for a wider audience: economists, statisticians, scientists, businessmen and casual users.

Content

1. Main indicators living standard of the population	5
2. Main macroeconomic indicators	11
3. Household characteristics. Income, expenses and consumption of population	15
4. Income inequality	41
5. Social security and social assistance for population	69
6. International comparisons	80
7. Statistical accuracy indicators	84

1. Main indicators living standard of the population

Final household consumption includes expenses or social transfers in kind, received from public administrations or non-profit institutions serving households, incurred by individual households on consumer goods and services.

Minimum monthly wage size is a guaranteed minimum monetary payment to an employee of general work (the easiest job) for performing it (employment duties) in normal condition and duration of working time per month. Minimum wage size, fixed annually by the Law of the Republic of Kazakhstan on national budget for the respective financial year, could not be below minimum means of subsistence and excludes bonuses, reimbursements and benefits, premium and other incentive payments; and it is paid in proportion to time worked.

Minimum pension is a minimum pension size fixed by the Law on national budget for the respective financial year.

Public pension is a monthly payment in cash provided to the civilians of the Republic of Kazakhstan upon reaching the pension age that fixed by the Law of Republic of Kazakhstan «On pension provision in the Republic of Kazakhstan» dated 21 June 2013 No.105-V.

Public pension size is annually fixed by the Law on national budget for the respective financial year with gradual approach to the minimum subsistence level.

¹⁾ Adjusted consumer price index.

²⁾ Data including uniformed service and without main pension payments.

³⁾ On data of household sampling survey.

⁴⁾ On data of the Ministry of Health of the Republic of Kazakhstan.

⁵⁾ Preliminary data.

⁶⁾ On data of the Ministry of Education and science of the Republic of Kazakhstan.

⁷⁾ The structure of the level of subsistence minimum is changed from January, 2018.

⁸⁾ Here and in the following tables of the collection, in order to be comparable with the data for 2015-2017 are recounted in connection with the division of the South Kazakhstan region into Shymkent and Turkestan region

2. Main macroeconomic indicators

Gross domestic product (GDP) at production stage is equal to the sum of the gross value-added of industries. Gross domestic product is calculated by market price, i.e. it includes net taxes for products and imports. «Net» means taxes after deduction of the respective subsidies. This is one of the most important indexes of the System of National Accounts characterizing final result of economic activities.

Consumer price index (CPI) is defined as a temporary change of average price level for fixed list of goods and services purchased for own consumption. Consumer price index is calculated on the base of the information provided by two sources:

- data on price change collected by direct recordings in the special points of purchase and service;
- households survey data regarding population consumer expenditure structure for the previous year.

Governmental budget is a central monetary fund comprising national and local budget without regard to redeemable financial operation between them.

Governmental income is a tax and nontax income, income from fixed-capital assets, transfers.

Governmental expenditure is funds given on a non-returnable basis.

Governmental deficit is equal to the difference between income and expenditure, net budget lending and financial assets balance. Household final consumption expenditure comprises household expenditures for consumption of goods and services in all the trade enterprises, at city markets and through street trading, consumer service enterprises, passenger transport, communication, hotels, commercial institutions of culture, health care, education and others, also consumption of goods and services in kind produced for own use, received as a wage.

3. Household characteristics. Income, expenses and consumption of population

Household is an economic entity consisted of one or more individuals living together, combining fully or partially incomes and property, and mutually consume(s) goods and services. Average household size is defined by dividing number of surveying household members into household numbers.

Household income presents a sum of monetary funds received by household members in the form of wage, business income, social benefits (pensions, scholarships, allowances, and other payments), interest, dividends and other property incomes, other cash receipts.

Income used on consumption is calculated from 2001 under the household sample survey as a basic criteria for estimating the standard of living, poverty and inequality indexes. Income used on consumption comprises consumption expenditure (without investment in production activity and saving) and cost (in cash) of consumed own-produced products and transfers in kind.

Income per capita is calculated by dividing total income into standard population size.

Real income index is calculated by means of consumer price index.

Population income includes income received from hired labour, self-employment, social transfers and other receipts in cash and in kind.

Income from hired labour is a salary; bonus to salary; all type of incentive pay in cash and in kind; fees; allowances: by profit, sick leave, dismissal wage, medical expenses compensation received from employer.

Self-employment income is business profit in cash and in kind, income from agricultural production (crop production and livestock farming) grown in own household.

Social transfers are pensions, subsistence allowance, profit and scholarships.

Other receipts are property income, welfare assistance from the relatives, mates, alimonies and others.

Property income is dividends and gains on stock and paper securities; interests on deposits, loan; gains on deposit; rental income on apartment, transports, equipment, lands as well as rentier income as a receipts in cash.

Welfare assistance from the relatives and mates is received money, benefits in kind from the relatives and mates at no charge.

Alimony is a financial and welfare assistance provided by one person to the other one empowered to receive.

Household purchasing power is a number of goods (each particular) which can be purchased by surveying household income per capita at average purchasing price. The household purchasing power can be expressed by ratio of income to minimum means of subsistence.

Population expenditure consists of consumer expenditure as well as other expenditures not related to the consumption.

Consumer expenditure is a part of expenditure for consuming the goods and services. It includes expenditure on foodstuff, eating out, alcohol beverages, tobacco, nonfood goods and paid services.

Other expenditure is a welfare assistance to the relatives, mates, alimonies, taxes, levies and other payments, loan settlement.

Consumer expenditure structure defines the level and content of these expenditures by its use, that means a share of household expenditures for purchasing of foodstuff, eating out, alcohol beverages, tobacco, nonfood goods and paid services.

Per capita consumption of main foodstuff is a number of foods (particularly by every type of foods) averagely consumed by a household member during a surveyed period. It is calculated by dividing the consumption of the specific type of foods into existing household members. Consumption of larger aggregates is recalculated on the base of the primary product aggregates.

Household production is goods, products and services, produced by households in an accounting period, intended both for own consumption and for trading.

4. Income inequality

The subsistence level means of is defined as a minimum income per person equal to minimum consumer basket price value composed of a consumer basket cost and nonfood product and service expenses.

The important factors are affecting to the subsistence level is a rate of food consumption, prices for these products and fixed balance between food and nonfood expenses. Food consumption standard for population is unique for the population of the republic and developed by the Kazakh Academy of Nutrition based on the calories provision and macronutrients consumption at the physiological level. Therefore foodstuff forming consumer basket provides a necessary amount of macronutrients. Minimum food basket price is calculated monthly by multiplying the food consumption standard to average price summed up to the middle of a month in regions, which allows considering the inflation rate in every region. Minimum consumer basket ratio between the food basket and share of expenditure for nonproduction goods and services is fixed by the Government of the Republic of Kazakhstan.

A set of food products in consumer basket consists of 43 items of foods. Before, the consumer basket consisted of 20 items of foods. Content of new food minimum is corrected based on any food seasonality; and its share is equal to 55 % of minimum means of subsistence.

As a rule, the subsistence level or size of its food part is used as absolute poverty criteria. Depending on the aim of poverty assessment, there is a common used relative poverty line that can be particularly fixed in percentage (40%, 50%, 60%, 75%) of median income (expense) or consumption.

Poverty line size depends on real economic opportunity and is targeted at social protection. Now the country sets poverty line for provision of social benefits that is equal to 70% of the subsistence level.

Income (expenses) deficit is defined as a total value of income (expenses) size deficient in the subsistence level (poverty line).

Proportion of population with income below the subsistence level (Consumer Basket Cost) is the ratio of population with income used for consumption below the subsistence level (Consumer Basket Cost) to total population number in percentage.

Poverty depth rate represents a standard deviation in income (consumption) rate below the subsistence level and defined as a range of poverty gap referred to total household members.

Poverty severity rate represents inequality among the poor- spread of income of the poor from its mean value. This is the mean squared error of surveyed household income deficit share from the fixed criteria.

Distribution of population by a size of income per capita is a number (share) of population ranged and grouped in the certain intervals by a size of income per capita.

Income distribution by the group of population is defined as a percentage of income within the population subgroups. A percentage of income can be distributed by quintile and income groups.

Quintile groups are formed by dividing of total population into numerically equal parts without regard to other characteristics. Decile and quintile groups -10% and 20% groups - are most frequently applicable.

Income groups are formed by the set income intervals.

A percentage of income by quintile or set income groups is defined as a share of relevant group in total population income.

Income equivalence scale is a coefficient adjusting the required level of income per capita in household's variable by size. Cost saving is taken into account as a result of co-residence of household members.

Modal income is a value of index frequently appearing in the rank of income distribution.

Median income is a value of index appearing at the center of income distribution.

Gini coefficient (by 10%, 20% groups) gives an opportunity to evaluate numerically the inequality level. It fixes deviation of actual income distribution by numerically equal (decile, quintile) groups from the equal distribution line.

5. Social security and social assistance for population

Average nominal monthly pension is calculated as a ratio of overall nominal monthly pension fixed to all the pensioners (pension recipients) registered at Social protection centers to overall pensioners (for the end of the year).

Number of pension recipients is a number of persons, for the end (beginning) of an accounting year, receiving monthly money as provided by the applicable law on pension. Total number of pensioners is calculated by the number of pensioners' accounts registered at Social protection centers.

Number of social protection benefits recipients by disabilities, death of a breadwinner and by age is a number of persons, for end (beginning) of an accounting year, receiving monthly money as provided by the applicable law on social protection benefits. Total number of social protection benefits recipients is calculated by the number of recipients' accounts registered at Social protection centers.

Number of the disabled is a group of the disabled registered at Social protection centers despite the time of recognizing as the disabled.

Residential care facility is a facility educating the preschool and school children for the governmental balance. There are infant orphanages of the common, family type, health camp type boarding schools for orphans and children with mental disabilities, preschool boarding schools.

Nursing homes (adult and children) are medical and social facilities designed for the permanent residence of the elderly and the disabled indigent in nursing and medical care.

Subsistence allowance is a state-provided payment for the individuals (family) with monthly income per capita below poverty line fixed in regions, in the cities of Nur-Sultan, Almaty and Shymkent.

According to the Law of the Republic of Kazakhstan "On subsistence allowance", the subsistence allowance should be granted to the citizens of the Republic of Kazakhstan, repatriates, people with status of refugees, foreigners and residents of the Republic of Kazakhstan, without citizenship, with average per capita income not exceeding the poverty line.

Subsistence allowance is not fixed for:

1) the unemployed not recorded at Public Employment Centers and the employable citizens of the Republic of Kazakhstan officially refused from the employment promotion except for the disabled and people under in-patient care more than a month, attendee, students, military students and master's students of intramural form of study as well as the citizens caring after the disabled of I, II and III groups, the oldest old, children up to seven years old;

2) the unemployed unreasonably refused from the job offered by Public Employment Centers, including from social works, professional trainings, upgrade qualifications, willfully not engaged into such jobs and trainings.

Data is provided on the base of the report by the Ministry of Labor and Social Protection of the Republic of Kazakhstan.

¹⁾ According to OECD data: <http://stats.oecd.org>

²⁾ According to Eurostat data: <https://appsso.eurostat.ec.europa.eu/nui/show.do> (data on 09.09.2019)

For reference: data on the indicators Average life expectancy, number of years and Gross domestic product, as a percentage of the previous year for 2018 are taken from the website www.eurasiancommission.org. Data for the Gini Coefficient index for 2018 are taken from the website www.cisstat.com

7. Statistical accuracy indicators

7.1 Accuracy of the result selective standard of living survey for 2019

	Survey results (averagely per month per person, tenge)	Mean error	Mean relative error	Sampling errors
				in percent
Income used on consumption	57 427	152.9	0.28	299.71
Expense	55 792	151.8	0.29	297.59
Income	57 725	159.6	0.29	312.75
Consumption expenditure	51 812	134.3	0.28	263.22

7.2 The relative standard error of estimate of result

	Income used on consumption	Expense	Income	Consumption expenditure
				in percent
Republic of Kazakhstan	0.28	0.29	0.29	0.28
Akmola	1.07	1.13	1.17	1.07
Aktobe	0.92	0.97	0.98	0.95
Almaty	1.13	1.12	1.17	1.08
Atyrau	0.86	0.86	1.12	0.81
Batys Kazakhstan	1.04	1.17	1.24	1.10
Zhambyl	0.98	1.00	0.97	0.99
Karagandy	1.16	1.19	1.09	1.09
Kostanai	0.98	1.06	1.02	1.01
Kyzylorda	1.00	1.01	1.00	1.00
Mangystau	0.75	0.75	1.11	0.73
Pavlodar	0.65	0.67	0.77	0.66
Soltuptyk Kazakhstan	0.96	1.00	0.98	0.97
Turkistan	1.29	1.35	1.17	1.28
Shygys Kazakhstan	1.19	1.25	1.15	1.18
Nur-Sultan city	1.11	1.11	1.20	1.03
Almaty city	1.28	1.28	1.23	1.26
Shymkent city	0.88	0.88	0.93	0.87
