Legend:

-- the phenomenon is absent
0,0 - insignificant value
x - data is confidential
... - no data

In some cases, minor discrepancies between the total and the sum of the terms are due to rounding of the data.

Preface

The compilation «Prices in wholesale, foreign trade and services in the Republic of Kazakhstan» contains data on price indices and prices for goods, products of wholesale and foreign trade, for rental of commercial real estate, changes in tariffs for cargo transportation services by all modes of transport, postal, courier and communications for legal entities.

Section 2 contains data on price indices of export deliveries and import receipts of goods and products in the republic.

Sections 3, 8 contain data on price indices and prices for goods, wholesale products. Information on prices for certain types of wholesale sales of goods and products is presented by the republic and regions.

Sections 4-6, 9-11 contain data on the tariff indices for cargo transportation by all types of transport, for postal and courier services for legal entities and for communication services in the republic and regions.

Sections 7, 12 contain data on the indices of prices and average prices for rental of commercial real estate in the republic and regions.

Data on price and tariff indices are given for various periods of comparison by main groups and individual items of goods and products, types and types of objects over the past five years, for 2021. they are reflected by months and quarters.

Prices by region are not published if they are represented by one or two base enterprises.

The publication is intended for senior management personnel, economists, statisticians, employees of management bodies and financial and economic services of enterprises, organizations, scientific, entrepreneurial and banking workers, faculty, students of economic universities, other specialists, the media.

Methodological explanations

A survey of the level and dynamics of prices and tariffs in the sectors of the economy is conducted monthly, quarterly throughout the republic for a selective circle of enterprises of various forms of ownership and legal forms, and a selected set of products, goods, services, facilities. On the basis of price survey data, individual, group and composite price indices (tariffs) are calculated for different periods of comparison.

The price index of export deliveries of goods, products characterizes the change in prices for goods produced in the republic and exported to other countries.

The price index of import receipts of goods, products characterizes the change in prices for products purchased in the countries of the world community for the needs of the republic.

Monitoring of changes in the prices of export deliveries, import receipts of goods, products is carried out on a sample set of basic objects, goods, products. Since 2016, the price indices of export deliveries, import receipts of goods, products are calculated on the basis of data from the nationwide statistical monitoring of the prices of enterprises of exporters, importers (form 1-C (export, import)), on mutual trade in goods with the member states of the Eurasian Economic Union (form 1-TS) and customs statistics presented in tenge.

The construction of price indices for export deliveries and import receipts provides for the formation of a weighting scheme that reflects the structure of foreign trade turnover. Price index weights represent the value of exported and imported products in the year preceding the reporting year.

The price index of wholesale sales of goods, products characterizes the change in prices for goods, products sold by wholesale trade enterprises to various users for their further professional use or their subsequent resale at retail.

Monitoring of changes in the prices of wholesale sales of goods and products is carried out on a sample set of basic objects of wholesale trade. The prices of wholesale sales of goods and products include VAT, taxes in the sphere of commodity circulation and other indirect taxes, but do not take into account the costs of delivering goods to consumers. The price index of wholesale sales of goods, products is calculated by type of product. The resulting indices are aggregated by classes, groups, sections, types of economic activity and wholesale trade in general.

The construction of the wholesale price index provides for the formation of a weighting scheme that reflects the structure of wholesale trade. The formation of the weighting scheme for the wholesale price index is based on the average annual data on the cost of wholesale services for a certain base year.

The index of tariffs for freight transportation characterizes the change in tariffs for services for the transportation of goods by all modes of transport, in the Republic of Kazakhstan it is calculated on the basis of changes in tariffs for the services of railway, road, air, inland waterway, pipeline and sea transport, and for the regions - for the services of road, air, inland waterway and pipeline transport.

Monitoring of changes in tariffs for freight transport is carried out on a selective network of base facilities, whose activities are related to the provision of these services. Tariffs for transport services are a system of rates (carriage fees) and charges for transportation received by transport enterprises from its users. A representative service for all types of transport means the transportation of a ton of the most massive cargo over a certain (fixed) distance.

When constructing tariff indices for freight transportation, a weighting scheme is used, formed on the basis of data on income received by transport enterprises from the provision of freight transportation services for the previous year.

The tariff indices for postal and courier services and the tariff indices for communication services characterize the change in time of tariffs for postal and courier services and communication services for legal entities.

To monitor the movement of tariffs for postal and courier services, enterprises are connected on a continuous basis. The base object for monitoring changes in tariffs for postal and courier services is the National Postal Operator. For communication services provided by a large number of organizations, purposeful sampling is used. The core network includes operators with the largest volumes of communication services for legal entities. Registration of tariffs for selected representative services is carried out monthly for specific representative services with certain specifications that allow identifying the service during the reporting period to ensure their comparability in tenge, excluding value added tax.

When constructing tariff indices for postal, courier and communications services, data on income received by enterprises of these types of activities from the provision of services for the previous year are used, which serve as a weighting base.

The commercial rental property price index is a relative indicator that characterizes the change in rental prices for non-residential commercial real estate.

Price changes are monitored through a selective network of basic enterprises of various forms of ownership. The rental price is the price of 1 square meter of the commercial property to be leased, including value added tax.

When constructing the price index for renting commercial real estate, a weighting scheme is used, formed on the basis of data on the volume of services rendered for the provision of commercial real estate for rent in current prices for a certain year.

Abbreviations

ton	metric ton
Gcal	gigacalorie
kg	kilogram
thousand kW.h.	thousand kilowatt hour (megawatt hour)
thousand sq.m.	thousand square meters
thousand cubic m	thousand cubic meters
cube m	cubic meter
sq.m.	square meter
thousand pieces	thousand pieces
