Agency on Statistics of the Republic of Kazakhstan
Edited by A.A. Smailov

The statistical data on social and economic status of Kazakhstan in 2007-2011 is presented in the general compendium. It includes tables characterizing the development of Kazakhstan's economy in and also the most important branches and sectors.

The data has been calculated in accordance with the principles of modern methodology which allows to compare them with international indicators.

This annual book is intended for the wide range of readers: embassies, international representatives, representatives of the Republic of Kazakhstan in foreign countries, officials of the budgetary organizations and establishments.

The statistical yearbook is available on the web-site of the Agency of the Republic of Kazakhstan on statistics www.stat.gov.kz.

Address: «The left-hand beach, house of the Ministries», Orynbor street, 8,
Astana, 010000
Tel. 8 (7172) 749547, 749295
Fax 8 (7172) 749546
E-mail: statistika@stat.kz
Internet: <http://www.stat.gov.kz>

Conventional symbols:

"-" - not applicable;

"..." - statistical data not available;

"0,0" - the phenomenon exists, but its magnitude is not rounded to a corresponding unit of measurement

The discrepancy between the totals and the sum in some cases can be explained by using rounded data.

1. GENERAL SURVEY

1.1 Geographic description of the Republic of Kazakhstan

Capital – Astana city

Territory of the republic (thsd. sq. km) - 2724,9
 Density of the population (inhabitants per 1 sq. km) – 6,1
 Number of the population as of 01.01.2012, thsd. persons – 16675
 Natural increase of the population (promille per 1000 population) - 13,8

Largest mountain ranges, m

Khan Taniry Peak (Saryzhaz Range) – 6995
 100 years of EGS Peak (Meridional Range) – 6276
 Talgar Peak (Ile Alatau) – 4979
 Shoktal Mountain (Kungey Alatau) – 4653
 Besbatkan Mountain (Zhetysu Alatau) – 4622
 Metallurg Mountain (Ile Alatau) - 4600
 Muztau Peak (Altai Mountains, Katyn Range) - 4506
 Manas Peak (Talas Range) - 4482
 Komsomol Peak (Ile Alatau) - 4330

Largest lakes, thsd. sq. km

Caspian Sea - 374
 Aral Sea (Central Asia) – 41
 Balkash - 18,2

Length of boundaries of the republic, km

Total – 13394
 of which with:
 Russian Federation – 7591
 Republic of Uzbekistan – 2354
 Turkmenistan – 426
 Kyrgyz Republic – 1241
 China – 1782
 along Caspian Sea - 600
 85022 rivers and temporary water streams are on the territory of the republic

Longest rivers, km

Ertys - 4248
 length within republic - 1698
 Esyl - 2450
 length within republic - 1400
 Zhajik - 2428
 length within republic - 1082
 Syr Darya - 2219
 length within republic – 1400

Largest oblast – Karagandinskaya, 428 thsd. sq. km.

Largest city - Almaty with number of population as of 01.01.2012 - 1450 thsd. persons

1.2 Administrative-territorial breakdown

as of January 1, 2012

	Territory ¹⁾ , thsd. sq. km	Rayons ²⁾	Cities and towns		Settlements	
			total	of which those of republican and oblast subordi-nation	village	aul (rural)

2.42 Use (utilization) of harmful substances captured by cleansing installations	40

2. SOCIO-DEMOGRAPHIC INDICATORS

Population

Current population estimates relating to periods between censuses are produced on the basis of the results of population census, plus annual number of births and arrivals in a given territory, minus deaths and departures from the given territory.

Population is broken down into urban and rural population considering their place of residence: those estimates include also the so-called urban settlements which are treated by law as administrative units (towns, urban settlements, factory and health resort settlements). All other settlements are considered rural.

Data on the total number of inhabitants as well as data relating to age and sex structure of population are based on estimates of resident population covering permanent residents of this given territory, including temporary absentees at the census date.

Population at giving age covers:

from the 1st of July of 1999 males at the age of 16-61 years and females at the age of 16-56 years;

from the 1st of July of 2000 males at the age of 16-61 years and 6 months and females at the age of 16-56 years and 6 months;

from the 1st of July of 2001 males at the age of 16-62 years and females at the age of 16-57 years.

The registration of vital events including **births, deaths, marriages and divorces** is based on vital records filed in civil registrar's offices: tabulation of vital events results from regularly records containing data compiled from a continuous and permanent registration system covering those vital events (births, deaths, mar-

riages and divorces). Only live-births are recorded.

National increase is the difference between live births and deaths in a certain year.

Age-specific birth rates characterize average annual birth of women for each age group. Birth rates are calculated as a ratio of number of births to women of a given age group during a calendar year to the midyear number of women of a given age (by current estimates). While calculating birth rate for age group under 20 years old, the denominator includes the number of women at the age of 15-19 years old. While calculating birth rate for the age group of 15-49 years old, numerator contains all births including births to women under 15 years old and at the age of 50 and over.

Age-specific birth rates characterize average death rate for each age group. Death rate are calculated as a ratio of number of deaths of a given age during a calendar year to the midyear number of population of a given age (by current estimates).

Life expectancy at birth is a mean number of years to be lived by a person from a hypothetical cohort, assuming the mortality level for each age remains the same as in the years for which the rate is computed.

Data related to the **migration of population** are compiled through tabulation of statistical records (forms) filled out by internal affairs bodies covering arrivals and departures registered simultaneously with filling out 'address forms' (arrivals and departures registration).

2.1 Main demographic indicators

	2007	2008	2009	2010	2011

Health

The Section contains the data on the network, medical activities, personnel of the medical institutions, some groups of diseases as well as social protection of population.

The total number of the physicians includes all physicians with the higher medical education by the end of the year engaged in the medical treatment and sanitary organizations, social protection institutions, scientific-research institutions, personnel training institutions, in the apparatus of the public health bodies and others.

The total number of paramedical personnel includes the persons with the secondary medical education (including dentists), who are engaged in the medical treatment, sanitary organizations, social protection institutions, pre-school institutions, schools, children's homes.)

Subject to the record in the hospitals are **the beds** by the end of the year which are equipped with the required appliances and are ready for laying the patients, irrespective of whether these beds are occupied by the patients or not.

The medical institutions rendering out-patient services to the population include all medical institutions which provide the out-patient services (polyclinics, out-

patient clinics, dispensaries, out-patient departments of the hospitals, health centers, etc.)

Morbidity rate is calculated as ratio of the number of patients with the diagnosis set for the first time and average annual number of resident population.

International Classification of diseases, Rev. 10, is used for statistical comparisons of data on morbidity and mortality.

Disabled person is the person who needs social assistance and protection in connection with restriction of vital activity in consequence of physical or medical deterioration.

Restriction of vital activity finds its expression in full or partial loss of ability to move, to orient, to communicate, to control the behavior as well as loss of working ability.

First registration of disability means determination of physical disability for the first time in the reference year.

Nursing and care house for aged people and disabled persons (for adults and children) is a medical and social institution intended for permanent residence of disabled and aged people who need caring for and medical service.

2.13 Main indicators of the development of public health

end of year

thsd.

Education

The section includes data on public and non-public educational establishments: pre-primary organizations, general education schools, vocational education establishments, colleges and higher education institutions.

Permanent pre-school organizations (which function not less than 10 months in a year) provide care, nursing, improvement of sanitary conditions, bringing up, and training of children aged from 1 to 6(7) years.

General education schools are educational establishments implementing educational programmes related to primary, basic and secondary general education. General education schools are the main units of continuous education. Day-time general education schools in statistical reports are

grouped by following types: primary, basic, secondary, for children with mental and physical deficiency, advanced schools, gymnasiums, lyceums.

Vocational education establishments (vocational schools, lyceums) are educational establishments implementing vocational programmes directed to advanced personnel training (of workers, employees) by various labour activities

Colleges are educational establishments implementing educational programmes of preparation of specialists with secondary specialized education.

Non-public educational establishments (schools, colleges, universities) cover licensed higher educational institutions.

2.17 Main indicators of education

	2007	2008	2009	2010	2011
Number of state pre-school organizations (at the end of year)	1 360	1 533	1 666	4 471	5 687
children in them, thsd. pupils	214,9	237,3	253,6	362,1	445,4
as percent of number of children of corresponding age	12,3	12,8	12,8	14,8	22,3
Share of children attending pre-school establishments in total number of children (children per 100 places)	110	109	108	106	104

	2007	2008	2009	2010	2011

Information society

This section reflects information about the usage of information and telecommunication technologies by households and enterprises.

Information and Communication Technologies (ICT) covers totality of methods, productive processes and program-technical means, integrated with the purpose of collecting, processing, keeping, disseminating, reflecting and using the information in users' interest.

Internet is a global informational system net parts of which are connected with each other by means of single address space based on reports of TCP/IP. Internet

consists of many connected computers and supplies access to computers, e-mail, announcement boards, data base, discussion groups, etc.

Internet user is a citizen of Kazakhstan who uses Internet at least an hour a week.

ADSL (Asymmetric Digital Subscriber Line) is a technology which allows organizing high-speed access to Internet in the telephone number while the telephone line will stay vacant.

Web site has independent domain name. One domain name corresponds to only one web site.

Culture

Theatres are sight organizations that carry out stage performance of works of literature and art (dramatic, musical and dramatic, musical, choreographic, puppet, pantomime, satire and humor, juvenile, for young people, experimental etc.).

Library is an institution that carries out informational, cultural, educational functions and possesses organizational stock of printed and hand-written documents as well as graphic, audio-visual materials, documents on electronic carriers, which are given for temporary use to individuals and legal entities.

Cinema is a building appointed for a movie show.

Film projector is a set of the assembled film equipment intended for film exhibition.

Museum is a cultural organization being created for storage, studying and presentation of museum exhibits and museum collections; it aims at carrying out cultural, educational and scientific functions and ensuring study, registration, storage and popularization of memorials of material and immaterial culture.

Criminality

The section contains data characterizing the state of criminality, including the most dangerous and most frequently committed crimes compiled by the Committee on legal statistics and special records of the General Prosecutor office of the Republic of Kazakhstan. There is an information on persons who committed crimes, their sex, age and social status description. Given are the data on the number of convicted, their composition and distribution by main types of punishment.

Offences is a socio-legal phenomenon comprising crimes committed on specific territory during specific period of time and having qualitative and quantitative measures.

Recorded crime is defined as a disclosed and registered deed presenting a threat to the society, for which a responsibility is envisaged according to a criminal legislation.

Humanity crime can be defined as crime against life, health, freedom and dignity of individuals.

Grave crime is a deliberate deed of extreme danger for society. It refers to the Criminal Code of the Republic of Kazakhstan.

Economic crime is the deed subject to criminal punishment committed in the sphere of production, distribution and consumption of goods and services, including service crimes (embezzlements; squandering; deception of consumers; violation of trade regulations; violation of state price discipline, tax evasion; production and sale of goods and services that do not meet safety requirements, etc.)

Juvenile crimes are crimes committed by adolescents aged from 14 go 18.

Offenders are persons officially registered by agencies of interior affairs and against whom criminal cases were initiated.

The convicts are persons on whom sentences have been passed and have come into legal force.

Composition of the convicted means their distribution by sex, age, imposed penalties, types of committed crimes.

2.31 Number of recorded crimes

Protection of environment

Forest area is a part of forest covered territory of Kazakhstan as well as territory not covered by forest, but used for forestry needs. Forest stock includes forest area, i.e. forest covered territory (actually covered by plantations of trees) and territory not covered by forest but intended for forestation (burnt out areas, cutting areas, waste grounds, glades, areas of dead plantations). Besides, forest stock includes nonforest areas: agricultural lands, hayfields, pastures, special purpose areas (roads, ditches, country estates etc.), and also swamps, sands, ravines, steep hillsides and other territories.

Forest management is the system of activities comprising demarcation, division of forests into plots, groups and categories (water protection forests, sanitary forests, etc.); inventories of forest resources (forest area and timber stocks); estimation of the size of annual felling area; reforestation and other activities.

Forest content is a ratio of forest covered territory to the whole territory of the republic

Total forest stock includes total stock of timber available on the forest covered territory.

Replenishment of valuable forests by young plantations is based on area referred to the category of valuable plantations of trees, the grown forest plantations (planting and sowing) and young plantations as a result of measures conducted for natural replenishment, reconstruction of not valuable plantations and maintenance felling.

Reforestation comprises activities aimed at restoration of forests on cutting areas, burnt out areas, waste grounds, glades and other former forestlands. Reforestation includes planting, sowing and measures promoting natural renewal of forests.

Forest planting includes works on planting of seedlings, saplings, cuttings and other planting material on the forest areas.

Maintenance felling comprise periodical cutting in plantations of a part of trees and bushes, which are carried out from the

moment of forming of plantations up to main felling with the purpose of creation of necessary composition of plantations and increase of their growth.

Maintenance of young plantations is one of the types of maintenance felling, which includes brightening and cleaning of forests conducted in young plantations usually in the age under 20 years with the purpose of preventing of main trees from shadowing with less valuable trees, and also creation of necessary composition of plantations.

Sanitary felling are carried out with the purpose of cutting and cleaning of trees infected and damaged by various illnesses and pests, and also cleaning of dead-wood and wind-fallen trees. Sanitary felling are divided on sampling and total felling.

Forest felling of main use and reforestation felling are carried out in ripe stand of trees for storing up of timber. Forest felling of main use are conducted in the forests of the 1 and 2 groups in ways directed to restoration of forests by valuable wood species and effective use.

Gross forestry output represents the expenses on cultivation of forest plantations, care of a forest and its maintenance in a state suitable for use.

Gross forestry output is estimated by the sum of actual costs made with the purpose of reproduction and increase of the efficiency of forests, and improvement of their qualitative composition.

Water abstraction from natural sources is removal of water from surface water bodies and aquifers for consumption. This does not include water used for electric power generation, ship locking, passage of fish and maintenance of navigable depth.

Water consumption (use) means use of water removed from different sources for communal and household needs. Consumption of recycled water and reuse of waste and sewage water is excluded.

Recycled and consequently used water refers to amounts of fresh water saved due to application of recycled and conse-

quent water supply systems, including use of waste and sewage water. Recycling water use does not include consumption in industrial and communal heating systems. The rate of recycled and consequently used water in total amount of industrial water consumption is calculated as the ratio of recycled and consequently used water to the total volume of this water and water consumption for industrial needs (excluding agricultural needs).

Waste water discharge into surface water bodies includes amounts of water pure corresponding to standards, water purified according to standards and contaminated run-offs (industrial and municipal).

Waste water pure according to standards refers to run-offs that discharged without treatment do not deteriorate quality standards in monitored places of water supply.

Waste water purified according to standards is defined as run-offs purified at treatment plants. Discharge of this water does not deteriorate the quality standards in monitored places of water supply, i.e. the pollutants' content should correspond to

the agreed maximum permissive discharge (MRD).

Contaminated waste water represents the run-offs discharged into surface water bodies without treatment (or after insufficient treatment), with pollutants' content exceeding the agreed MPD.

Stationary source of air polluting emissions is defined as immobile technological unit (device, apparatus, etc), that in the process of work emits contaminating substances in the air. Other sources (pit heaps, reservoirs, etc) are also classified here.

Volume of pollutants captured (detoxified) includes all types of pollutants captured (detoxified) by dust-arresting (gas-cleaning) plants out of the total volume of pollutants emitted by stationary sources.

Harmful substances emitted into atmosphere by stationary sources include total amount of all contaminants coming to air basin both after treatment at dust-arresting (gas-cleaning) plants (as a result of insufficient capture and treatment) and without treatment (contaminates from organized and non-organized sources).

Population income and expenditures

The section contains data characterizing socio-economic changes occurring in households. The data are obtained according to the results of regularly conducted sampling surveys of households.

Since January 2001 in household statistics has been carried out a transition to the new sampling methods that are based on appropriate international standards and recommendations of the World Bank. A new sample of 12 thousand households has been drawn, which is representative on republican as well as on oblast levels. In the framework of the program of a sample survey of households, which is applied since 2001, for more objective reflection of material welfare level of population there was adopted a methodology of estimation of money income of population through their expenditures. Indicator of income that was used for consumption has been conceptually defined and applied as the basic criterion for estimation of the welfare level of population, calculation of poverty and inequality indicators according to a new survey program.

The quality of income data, which have been collected in the course of sample surveys of households, is estimated by matching of survey results with the SNA data. For obtaining more objective data there is made a calculation of alternative indicator of nominal money income of population by their estimation with the macrolevel data.

Household is a small group of persons living together, combining (completely or partly) their income and property and consuming jointly certain types of goods and services, which are represented mainly by dwellings and food products. Household can consist of one person.

Nominal money income of population refers to cash means allocated by population for current consumption, productive activity and savings. Their value is determined by computation at the macrolevel and includes estimation of money income of popu-

lation from hired employment and self-employment (with imputation for remuneration of labour and non-coverage of the number of employed population by statistical reporting) and payment of social transfers.

Real money income comprises money income in consideration of the consumer price changes.

Labour income is an income from hired employment and self-employment. In accordance with the methodology of surveys of households and labour market, income from sales of agricultural products is included in labor income (as a component of income from self-employment).

Household income used for consumption is a sum of money incomes used for consumption (not included are cash means set apart by households for savings and capital investment in productive activity of households), cost of own products consumed and transfers in kind. Cost estimate of the consumption of own production is determined according to the average purchase prices for goods in the region.

Money expenditures are consumer expenditures, taxes, duties, payments and other items not related to the consumption.

Consumer expenditures refer to a part of money expenditures of population, allocated to a purchase of consumer products and services. It comprises purchases of food products, expenses for eating out, purchases of alcohol beverages, tobacco goods, non-food products and marketable services.

Average per capita money income purchasing power is a quantity of products (of each separately) that could be bought for the amount of average per capita money income of surveyed households at average purchase prices.

Differences in the structure and titles of selected groups of goods and services are explained by changes in their classification connected with the transition to a new program of sample surveys.

as percent of total

Changes of main indicators related to money income and subsistence level

tenge

Inequality of the income distribution

Share (number) of population with income below the value of subsistence level (cost of food basket) is a percentage share of population with an income level below the specified criterion.

Poverty gap refers to the average deviation of the income (consumption) level of the surveyed households from the specified criterion (value of subsistence level or food basket).

Poverty acuteness more completely characterizes the poverty gap. It is determined as an average of quadratic deviations of the share of income deficit of the surveyed households' members from specified criterion. It represents the inequality among the poor – the degree of the income spread among the poor.

Quantile groups of population are formed by dividing of total population into numerically equal parts regardless of other features. Decile and quantile divisions, 10 and 20 percent groups, are the most fre-

quently applied divisions.

Income concentration by quantile groups of population is determined as a share of the appropriate group in total volume of money income of population.

Coefficient of funds measures the ratio between average income of comparable groups of population in the tenth and first decile groups of the distribution row.

Coefficient of inequality of the income distribution among the population (Lorentz income concentration factor or Gini index) allows estimating numerically the degree of inequality. It determines the degree of deviation of actual income distribution of numerically equal population groups from the equal distribution line. Statistical value of the income inequality varies from 0 to 1; 0 - means perfect income equality for all groups of population, 1 means perfect inequality, when the total income is owned by one group of persons.

3.3 Main indicators of inequality of the income distribution¹⁾

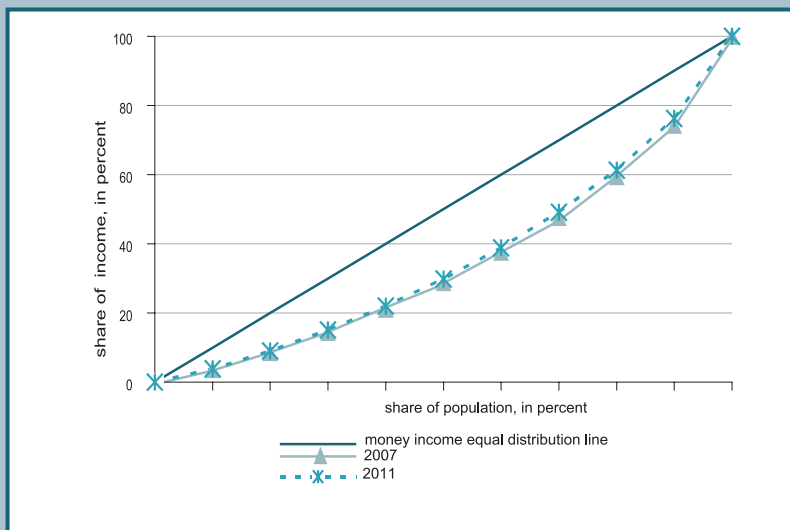

percent

	2007	2008	2009	2010	2011
Share of population with income lower than value of subsistence level ²⁾	12,7	12,1	8,2	6,5	5,3
Share of population with income lower than cost of food basket ²⁾	1,4	1,2	0,6	0,4	0,5
Poverty gap	2,4	2,3	1,3	1,1	0,9
Poverty acuteness	0,8	0,7	0,3	0,3	0,3
Income ratio of highest 10% to lowest 10%, times	7,2	6,2	5,3	5,7	6,1
Gini index by 10 percent groups of population	0,309	0,288	0,267	0,278	0,289

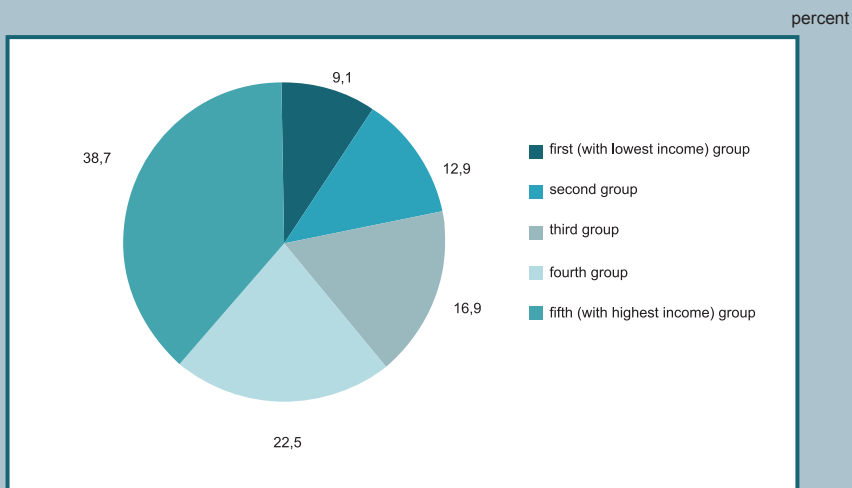

¹⁾ Obtained data are based on the income equivalence scale.

²⁾ Indicators were recounted on the basis of value of subsistence level introduced in 01.01.2006. Households' income used for consumption.

Inequality in distribution of total income among decile groups of population with different income level (Lorentz curve) in 2007 and 2011

Share of income used for consumption by 20 percent (quantile) groups of population in 2011

Housing conditions of population

The section contains data on housing stock, its improvement, housing conditions of population.

Housing stock comprises dwellings of all types of ownership locating on the territory of the Republic of Kazakhstan. Since 2000 it includes dwelling houses, flats, official dwelling rooms and other premises in other buildings suitable for living. Hostels, children's homes, old people's homes, country houses (dachas), summer garden houses, sport and tourist centers, motels, camping-sites, sanatoriums, rest homes, holiday hotels, guest houses, hotels, barracks, railway coaches and other premises intended for rest, seasonal and temporary residence in them.

Dwelling is a separate dwelling unit (individual dwelling house or apartment), intended and used for permanent residence.

Dwelling house is a building, at least half of which consists of living quarters.

Residential area is a sum of living spaces of rooms (bedroom, drawing room, nursery, home cabinet etc.) in a dwelling, esti-

mated in square meters.

Nonresidential area is a sum of areas of interior auxiliary rooms (kitchen, bathroom, toilet, anteroom, corridor, housing pantry etc.) in a dwelling, estimated in square meters.

Usable area is a sum of residential and nonresidential areas in a dwelling.

State housing stock comprises state owned dwellings that are under authority of local executive bodies (state communal housing stock) or of state enterprise (housing stock of state enterprise).

Private housing stock includes dwellings that are in the ownership of individuals or legal entities based on non-state ownership.

Provision of population with dwellings is determined as a ratio of usable area of dwellings (in square meters) and number of persons domiciling in them.

Equipping of housing stock with utilities comprises provision of such conveniences as water supply, sewerage, heating, gas, hot water, bath (shower) etc.

3.4 Main indicators of housing conditions of the population

Labour market

Economically active and non-active population

Economically active population (labour force) is a part of population at the age determined for measurement of economic activity of the population providing supply of the labour force for production of goods and services. Economically active population comprises persons employed in all economic activities as well as unemployed.

Economically non-active (passive) population include persons at the age determined for measurement of economic activity of the population who are not employed or unemployed during the reference period.

Employed (working) population - all persons at a certain age can be classified as employees or self-employed workers.

Employees (paid workers) are persons working under the hire contract for payment (remuneration) in form of wages and salaries, premiums, additions etc. or in kind.

Self-employment is an activity, in which the size of remuneration directly depends on income received from production and sales of goods and services (when own consumption is considered as a part of income).

In accordance with the International Classification of Occupations (employment status) determined are the following groups of self-employed persons:

employers are persons who manage their own enterprise or are engaged in independent entrepreneurship in any economic activity and have one or more employees.

own-account workers comprise persons who, while working independently or with one or more partners, are engaged in self-employment and do not hire other work-

ers on a constant basis.

unpaid family workers are persons who, as a rule, work without remuneration at the enterprise farm which is managed by their relative person.

members of producers' cooperative include persons who are members of labor cooperative which is engaged in entrepreneur activity.

The unemployed comprise persons at the age specified for measurement of the economic activity of population who during the reference period were: without work (were not in employment), actively seeking work, currently available for work during a certain period.

Unemployment rate is a percentage of unemployed in total number of economically active population.

Proportion of the registered unemployed in the total number of economically active population is determined by dividing the number of unemployed registered at employment offices by the number of economically active population.

The number of persons applied to the authorized employment offices for jobs placement refers to the total number of those applied to the employment offices for jobs placement, including the employed persons seeking other or additional job for various

The number of persons placed in a job is the number of those who found a job with the help of the authorized employment offices.

Labour remuneration

The section covers data on average monthly wages and salaries, number of pensioners and average monthly pensions.

Average monthly nominal wages and salaries of one employee are calculated by dividing the accrued labour remuneration fund by the number of persons actually worked.

Index of nominal wages and salaries is a relative indicator that characterizes changes of wages and salaries in the reference period as compared with the base period.

Index of real wages and salaries is a relative indicator that characterizes changes of nominal wages and salaries in consider-

ation of price changes in the reference period as compared with the base period. It characterizes purchasing power of the nominal wages and salaries.

Is computed by dividing the index of average monthly nominal wages and salaries by consumer price index for goods and services. Both indices should refer to one and the same time period.

Average size of assigned monthly pension (social benefit) is calculated as a ratio of the total sum of monthly pensions (social benefits) of all pensioners (benefit recipients), registered with labour and social protection offices, and the number of those receiving pensions.

4.5 Average monthly nominal earnings by economic activities*

5. PRICES

The system of indicators related to price statistics represents a set of interrelated and complementary indicators describing actual price levels (tariffs) as well as their percentage change.

In section the data on dynamics of prices in consumer and real sectors of economy as a whole and in separate segments, and also on average level of prices (tariffs) of the most important kinds of production, goods and services are represented.

Consumer price index characterizes a time change of a common price level for goods and services acquired by households for personal consumption. The registration of the prices is made in a sample of trade and service enterprises in all regional centers, capital and in a certain circle of cities and regional centers. The system of weighting used for aggregation of data in the expenditure side is calculated on the basis of surveys of households for a prior year. The level of average prices in the republic is determined as weighted arithmetic average of price levels of selected regions.

Producer's price index for industrial products reflects dynamics of prices for industrial products made by republican enterprises irrespective of value added tax and excises. The observation of the price changes is carried out on a sample of base enterprises. The registration of the prices is made according to a defined list of goods, which include the most representative goods close by main qualitative parameters, raw materials used and technological processes of production. For aggregation of the price indices by types of economic activity the data on the value of industrial production for a prior year are used as the base of weighting.

Purchase price index for productive and technical products is intended for measurement of dynamics of prices for material resources acquired by industrial enterprises of the republic for technological process. The registration is carried out for selected groups of resources.

Price index for export products char-

acterizes the change of prices for goods produced in the republic and exported to other countries.

Price index for import products reflects dynamics of prices for products purchased in countries of the world community for needs of the republic.

They are calculated by use of data of customs statistics. The price of foreign trade, which is to be registered, represents the price of sales of exported and imported products not taking into account the customs duties and expenditures connected with domestic intermediaries (wholesale and retail). The observation of dynamics of prices is made for a set of representative goods included in commodity sections. For aggregation of individual indices the data related to the value of exported and imported products in a year prior to a reference one are used.

Index of tariffs for freight shipping gives an evaluation of change of the transportation rates for services on freight shipping by different types of transport. It determines their dynamics for current period in comparison with the base one, irrespective of the changes in the structure of cargo shipped by various characteristics (type of cargo, size of delivery, periods of delivery etc.). Tariffs for representative services are registered for all types of transport. As a representative service of transportation of goods by different types of transport the shipping of one ton of the most mass cargo for a specified distance (defined path) is taken. For the base of weighting the data about the revenues of transport enterprises from rendering the services in carriage of cargoes during a defined base year are used.

Construction price index by elements of technological structure characterizes changes of prices in construction. It is calculated by aggregation of price indices for construction and assembly works (CAW), technological equipment and other works and costs weighted upon their share in total volume of construction investment.

In the basis of price index for construc-

tion and assembly works there are the data of registration of prices for purchased construction materials, articles and constructions at basic contracting agencies of all regions of the republic in consideration of tendencies of price changes for other items of material and other costs characterizing value of construction and assembly works. Calculation is made on the basis of specially developed technological models of construction and assembly works related to various economic activities. The technological model represents a set of resources characterizing production costs for objects of certain economic activity and combining elements of intermediate consumption that are transformed or fully consumed in the process of carrying out construction and assembly works.

Price index for agricultural products reflects the dynamics of changes of prices for products of agrarian sector sold through all channels of sales in the reporting period compared with the base one. It is calculated by aggregation of price indices for plant growing and animal husbandry. Each of the indices represents the weighted value of individual indices for the goods, which are included in homogeneous group. The volume of products sold during the previous year is used as the base of weighting of individual indices.

Actual level of the average price of selected agricultural products is defined as weighted arithmetic average of price levels of selected regions.

5.1 Price indices by sectors of the economy

percent

	2007	2008	2009	2010	2011
At the end of period to December of previous year					
Consumer price index	118,8	109,5	106,2	107,8	107,4
food goods	126,6	110,8	103,0	110,1	109,1

National wealth

National wealth, as covered by the current statistics, is composed of accumulated tangible and non-tangible assets produced by labor that are disposed by the society at the moment. In accordance with the economic purposes, the national wealth is divided into the following groups: fixed assets, intangible assets, commodity and material stocks. Households' property is taken into account in the structure of fixed assets on buildings and constructions, machinery, livestock and perennial plantations; stocks of agricultural produce – in commodity and

material stocks. The value of consumer durables held by households is given in the item "Memo".

Fixed assets are defined as part of the national wealth produced in processes of production that is used repeatedly, or continuously, in an invariable material form during long time in the economy, transferring gradually its value to the goods and services produced.

Fixed assets include buildings and constructions, machines and equipment (material-working and power machines and facili-

ties, measuring and regulating instruments and devices, laboratory equipment, computer techniques), transport facilities, production and technical equipment, working and productive livestock, special tools and other fixed assets.

The availability of fixed assets and their structure are considered at primary or current value and balance sheet value.

Primary value is a value of actual costs for construction or acquisition of fixed assets, including paid unrequited taxes and duties as well as costs for delivery, installation, exploitation and all other expenses directly connected with putting of the asset into operation for its functional use.

Current value is defined as value of fixed assets at current market prices as of certain date.

Balance sheet value is a primary or current value of fixed assets less value of accrued depreciation, i.e. reporting value of the assets (residual value).

Fixed assets' liquidation (withdrawal) coefficient characterizes a reproduction of fixed assets. It is determined as a ratio of fixed assets withdrawn during the year and ones available at the beginning of the year.

Fixed assets' renewal coefficient reflects the proportion of newly commissioned fixed assets in their amount at the end of year.

Depreciation of fixed assets is a process of loss of physical and morale characteristics of fixed assets, which reflect an obsolescence of the operational fixed assets.

Intangible assets are assets that do not have physical natural form, but have an "intangible value" and bring an additional profit to an economic entity during a long pe-

riod of time or constantly.

Considered as intangible assets are trade marks, the registered places of commodity origin, goodwill, "know-how", licenses, intellectual property, organizational expenses, right for use of natural resources, right for use of productive information, software and other.

Intangible assets are assets in geological prospecting, software, original works of recreation genre, literature and art, and other intangible fixed assets intended for use for more than one year. New information, special knowledge, etc. are related to other intangible assets that can be used only by one unit being owner or having the required license.

Intangible non-produced assets are non-produced assets theoretically established by the society. They are verified by the legal or accounting actions as patent grant or assignment of the certain economical profit to the third party. The patenting objects, lease contracts and other assignment contracts, acquired goodwill and other intangible non-produced assets are related to this category.

Commodity and material stocks are an important part of national wealth of the country, its most mobile and renewable component. These cover productive commodity and material stocks, work in progress, finished products and goods for resale, material reserves. What makes the material circulating assets particular is that they, participating in one production cycle, change their material form, fully transferring their value to the value of goods and services produced of those.

System of national accounts

The **System of National Accounts** used in the Republic of Kazakhstan is based on the SNA 93 concepts. It is compiled with consideration of peculiarities and functioning of transition economy.

The SNA provides a comprehensive accounting framework to compile aggregate indicators relating to economic branches

development at different stages of highlighting production and their mutual correspondence. Each stage has its own special account or a group of accounts. Thus, it enables to monitor the total flows of goods and services produced as well as value added, starting from the initial production to the final use stage.

Nowadays the production account, generation of income account, allocation of primary income account, secondary distribution of income account, redistribution of income in kind account, use of income account, capital account and goods and services account for 1990–2005 are being compiled in the Republic of Kazakhstan

Goods and services account is a special summary table. Like all other accounts, it consists of two parts: on the «resources» side the output and imports of goods and services, taxes on products and imports, subsidies on products are recorded; on the «uses» side consumer expenditures on goods and services (intermediate and final), gross fixed capital formation, changes in inventories, and exports are recorded.

Production account records transactions directly linked to the production process. In this account the value added is defined, which is the basis for calculating of the gross domestic product, a main aggregate of the development of the economy.

Output is the total value of goods and services produced in the economy in the reporting period.

Output of goods includes such branches as industry, agriculture, forestry, fishery, construction.

Output of services includes services of trade, transport, communications, education, health care and social services, etc.

Intermediate consumption is equal to the value of goods and services, transformed or totally consumed in the current process of production. The intermediate consumption does not include consumption of fixed capital.

Intermediate consumption also covers payments of financial intermediate services indirectly measured (secondary banks).

Gross value added is calculated at the level of the economy branches as the difference between output of goods and services and intermediate consumption. The term «gross» means, that the value added includes the value of fixed capital consumed in the process of production.

Taxes on products are those levied

proportionally to the quantity and value of goods and services that are produced, sold and imported by residents. Taxes on products include: value added tax (VAT) for products (works, services) produced on the territory of the country and imported to the country; excise taxes for selected groups and kinds of goods produced on the territory of the country; international trade taxes; auction sales duties; vehicles transit fees, charges for use of symbolics by legal entities and natural persons.

Subsidies are current unrequited payments from the State budget to enterprises provided to those enterprises, which are really producing particular goods and services.

Gross domestic product (GDP) by the production method is obtained by adding together values added by branches. Gross domestic product is calculated at market prices, i.e. includes net taxes on products and imports. The term «net» means that taxes are represented fewer related subsidies. It is one of the most important indicators of the System of National Accounts, characterizing the final result of economic activity of the country.

Generation of income account reflects primary incomes payable by resident institutional units directly engaged in the process of production of goods and services.

An institutional unit is considered to be a **resident** within a country when it has a point of economic interest on that territory, i.e. is engaged or is going to be engaged in some economic activities or transactions during a long period, usually assimilated to one year.

Compensation of employees is defined as remuneration, in cash or in kind, payable to employees for work completed during the accounting period. Compensation of employees is recorded on the basis of gross amounts and includes contributions to social insurance schemes, income tax deductions, and other payments, payable by employees, even if those are actually deducted by administration and paid directly to social insurance funds, tax services or any other institutions on behalf of the employees.

Other taxes on production consist of taxes connected with use of production factors as well as payments for licences and permits for carrying out any production activity or other compulsory payments that are necessary for carrying out activity of a resident producing unit. These taxes can be levied for land, fixed assets or labour force that are used in the course of production or for the right to carry out certain activities or transactions – land tax, property tax, vehicle tax, licenses for the right to carry out selected activities, environment pollution tax etc.

Gross (or net) operating surplus of the economy is the part of value added which remains with producers after deducting expenditures related to the compensation of employees and taxes on production. The terms «gross» and «net» in this case indicate that this indicator includes or excludes consumption of fixed capital in the production process.

Surplus generated as a result of production activity of the enterprises owned by households is called «**Gross mixed income**», because it reflects both remuneration of work done by the owner of enterprise and entrepreneurial income.

Consumption of fixed capital is defined as the decline, during the accounting period, in the current value of fixed assets used in the process of production as a result of physical depreciation, obsolescence or accidental damages.

Allocation of primary income account characterizes primary income distribution obtained from the production activity or property among residential institutional units or sectors.

Property incomes include incomes receivable or payable by institutional units in connection with putting the financial assets, land, and other non-financial assets (minerals and other natural resources, patents, licenses, etc.) at the disposal of other institutional units.

Balance of primary incomes characterizes income receivable by institutional units as a result of their participation in production or from property. It is defined as the

difference between all primary incomes receivable and payable by residential units. At the level of the total economy the balance of primary incomes calculated on gross basis, i.e. before deduction of fixed capital consumption, is equal to gross national income. The balance of primary incomes calculated on net basis (after deduction of consumption of fixed capital) is equal to net national income.

Secondary distribution of income account reflects the transformation of the balance of primary incomes by sectors into their disposable incomes, as a result of receipts and payments of current transfers.

Transfer is defined as a transaction in which one institutional unit provides a good, service or asset (financial or non-financial) to another unit without receiving from the latter any good, service or asset in return. The current and capital transfers are being deferred. They may be paid either in cash or in kind.

Current transfers include current taxes on income, wealth, etc.; social security contributions and benefits; voluntary payments and gifts of non-capital character, fines, etc.

Disposable income is defined as income left at institutional units' disposal for final consumption and saving. It is equal to the balance of primary incomes less income payable as current transfers plus current transfers' receivable. The sum of disposable incomes of all resident institutional units is equal to gross national disposable income.

At the stage of use, gross domestic product is calculated as the sum of final consumption of goods and services, gross capital formation and net exports (exports less imports).

Use of disposable income account shows how households, general government and non-profit institutions serving households (NPISHs) distribute their disposable income between final consumption expenditures and saving.

Final consumption expenditures consist of final consumption expenditures of households, general government, final consumption expenditures on individual goods

and services and collective services, and also final consumption expenditures of non-profit institutions serving households.

Such grouping shows, which sector pays for final consumption.

Final consumption expenditures of households include expenditures for purchasing consumer goods and services from all trade enterprises, city markets and through non-organized trade (street vendors), from public service enterprises, passenger transport, communications establishments, hotels, commercial institutions of culture, health care, education, and also other consumption of goods and services in kind, produced for own use (agricultural production of personal subsidiary plots, imputed services of owner-occupied dwellings), and received as labor remuneration.

General government final consumption expenditures on individual goods and services consist of expenditures of government institutions on consumer goods and services intended for personal consumption. Such expenditures are funded from the State budget and extra-budget funds.

General government final consumption expenditures on collective services include services rendered by the enterprises and organizations which meet needs not of separate households but of a whole community or its groups and are compensated from the State budget. This indicator includes expenditures on defense, general government, roads, scientific activity, public services and services of institutions serving agriculture financed from the State budget.

Final consumption expenditures of non-profit institutions serving households are expenditures of public associations on consumer goods and services provided free to households. Also the services provided free by enterprises and organizations to their employees in education, health care and culture are included here.

Gross Fixed Capital Formation is defined as resident units' investments in fixed assets aimed on new income generation in future for using it in the production process.

Changes in inventories comprise

changes in productive stocks of semi-finished and finished products, and products for resale.

The value of changes in inventories during a given accounting period is equal to the difference between the value of inventories at the end and at the beginning of the period, estimated at average market prices of the examined period in order to eliminate the influence of prices.

Capital transfers are defined as free transfers of ownership of capital assets (other than inventories and cash) or finance for their acquisition from one institutional unit to another. Capital transfers are usually nonrecurring and considerable in value transactions connected with acquisitions or disposals of assets by participants of the transaction. They include taxes on capital, investment grants, other capital transfers.

Net lending (+) or net borrowing (-) is defined as the excess or deficit of the financial sources over the expenditures on net acquisition of non-financial assets. At the level of the economy, net lending or net borrowing shows the value of resources paid to the rest of the world and received from the rest of the world.

Net exports are defined as the difference between exports and imports and include the turnover of the trade of Kazakhstan with foreign countries, including the CIS countries.

Principles of evaluation: In the SNA, valuation is made at current prices used at the moment of transactions.

Production and use of GDP is valued at current market prices existing in the period of production or use of products.

In order to eliminate the influence of various taxes and subsidies in different branches of the economy on the structure of production and generation of income, branch indicators are valued at basic prices.

Basic price is the amount receivable by the producer for a unit of a good or service excluding any taxes on products and imports, but including subsidies on products and imports.

Non-market goods and services are

evaluated at market prices of similar goods and services sold at the market when it is possible to determine them, or, by expenditures on production when market prices are not available (particularly, services of government and non-profit institutions are evaluated in this way).

All indicators at current prices, including changes in inventories and consumption of fixed capital, are evaluated at average prices of the accounting period.

In the SNA, output, intermediate consumption, operating surplus and increase in inventories are calculated, **excluding holding gains (losses)**, which are defined as the value of products generated due to changes in prices during the period when the products were held in stocks. In the process of inflation the holding gains (losses) can be very high.

Reevaluation at constant prices (of previous year) is made for GDP both from the production side and from the use side. The indicators of the production of GDP are reevaluated at constant prices with the double deflation method in which the value

added at constant prices is equal to the difference between the value of output and the value of intermediate consumption at constant prices.

Reevaluation at constant prices is made by two methods:

- deflation of data at current prices for the accounting period by corresponding price indices
- extrapolation of data at current prices for the base year by volume indices or physical indicators.

To reevaluate the indicators of use of GDP at constant prices relevant price indices (consumer price index, capital investment price index, etc.) and physical indicators were applied.

GDP deflator index is the ratio of GDP at current prices to GDP at constant prices of the previous period. Unlike the goods and services prices index, the GDP deflator measures change in compensation of employees, operating surplus (including mixed income), and consumption of fixed capital resulting from changes in prices and nominal net taxes.

6.6 Economic indicators

	2007	2008	2009	2010	2011
Gross domestic product (GDP), mln. tenge	12 849 794,0	16 052 919,2	17 007 647,0	21 815 517,0	27 571 889,0

Fixed capital investment

Investment in non-financial assets consist of the following components: fixed capital investment, costs of capital repair, inventory investment, investment in non-produced tangible and intangible assets and investment in other non-financial assets.

Fixed capital investment comprise investment in buildings and constructions; machinery and equipment; acquisition of work-stock and productive livestock; plantations; mineral prospecting; computer and software support; original literary and art works; new information; special knowledge which is very rarely used in production.

Fixed capital investment include the following indicators:

Construction and assembly works;

Machinery, equipment, tools and implements;

Capital repair of fixed assets;

Other capital works and costs.

Fixed assets put into operation cover costs of enterprises, buildings and constructions of either production or non-production purposes finished and put into operation in the reporting period; costs of equipment, machinery, motor vehicles of all kinds (to be installed or not, included or not included in construction's estimate) put into operation; costs of tools, implements and other supplies included in fixed assets; costs of perennial plantations (gardens); costs of irrigation and drainage works; costs of oil and gas exploitation wells finished and put into operation, and also prospecting wells with due yields to be turned over to operation; capital costs of land improvement and other costs connected with increase in value of fixed assets.

The Activity of enterprises with foreign share

The data that are presented in the section on "the Activity of enterprises with foreign share" are based on information received after processing the data from statistical reports of enterprises with foreign investor's share and of enterprises that are fully owned by foreign investors.

The data in the line "total" of the table by partner countries could be less than components by countries as some enterprises have two or more partner countries. The volumes of such enterprises are given for each partner country.

Science and innovations

Research institutions regardless of their branch identity are engaged in research activities including fundamental and applied researches and developments in all branches of science, and also in rendering scientific and technical services.

Research institutions and enterprises

engaged in research activities include research institutes, design and prospecting organizations, pilot production plants not serving any outside entities, higher education establishments, scientific and technical units of industrial enterprises engaged in research, design and technological works, and

also other organizations reporting R&D activities in the period covered by their reports.

Specialists engaged in research and development activities cover specialists with higher and secondary specialized education (including post-graduates) who are directly involved in performing research and technical works, and also heads of research institutions and subdivisions engaged in research activities.

Excluded are managers and other accounting and planning staff, financial and material supply functionaries, and also personnel engaged in supplying scientific and technical information, those serving scientific, scientific and technical, and other special libraries, workers of patent units, laboratory workers without higher or secondary specialized education, accountants typists, clerical workers, etc.

Professors and associates engaged in educational activity combine this with performing research and technical works in research subdivisions or at faculties of higher education establishments.

Innovation activity is an activity directed to the application of new ideas, scientific knowledge, technologies to various areas of production and field of the society management, the outcomes of which can be used for economic growth and competitive strength.

Technological innovations relate to the activity connected with the development and implementation of innovations. In particular, in industry they refer to technologically new products and processes as well as significant technological improvements of products and processes; in services sector – to technologically new or significantly improved services and new or advanced techniques of production of services.

Innovatively active enterprises are those enterprises that carry out development and application of new or improved products, technological processes or other kinds of the innovation activity.

Volume of the innovation produce includes products produced in the reference year on the basis of various technological innovations.

Business register

In the section given are the data on legal entities of the Republic of Kazakhstan on the basis of State statistical register. Legal entities are classified by size according to their payroll number of employees as follows: small (up to 50 persons) medium (from 51 up to 250 persons) large (more than 250 persons)

The section on "Small business" contains main results of statistical observation of small enterprises. The survey was conducted under the unique programme, and it covered small enterprises (independent legal entities) with main type of activity (according to actual industrial classification of economic activities) as follows:

- agriculture, hunting and forestry
- fishing, fish breeding
- mining
- manufacturing
- production and distribution of electricity, gas and water
- construction
- trade; repair of motor vehicles and personal and household goods
- hotels and restaurants
- transport
- communications
- activities auxiliary to financial intermediation
- real estate activities, renting and services rendered to consumers
- community, social and personal service activities

The following concepts have been used for registration of small enterprises:

registered legal entities are legal persons (active and non-active) officially regis-

tered as of the end of the reference period;

payroll number of employees is an average number of employees in the reference year, excluding persons holding more than one job and contract workers;

total number of workers and employees is a payroll number of employees, persons holding more than one job, contract workers, unpaid workers (employers and family members at the giving age who are working on own enterprises for receiving revenues or family income);

volume of produce (goods, services) includes an actual cost of produce (goods, services) supplied (shipped); the cost of produce that has been used for own needs; change in stocks of finished products which are in storehouses and intended for sales, change in residuals of work-in-progress;

expenses on production and sales of produce (goods, services) refer to all actual expenses on production and sales of produce (goods, services), both those related to production and those not included in the cost and referred to as expenses of the period;

financial result characterizes the efficiency of the activity of small enterprises, their profit or losses for the reference year.

Peasant (private) farm is a family labour association of people, in which the business activity is inseparably linked with the usage of agricultural lands for production of agricultural produce as well as processing and sales of this produce.

External trade

External merchandise trade statistics covers data in this publication **excluding non-organized trade** which are based on the data from freight customs declarations for 2003-2005 recalculated in consideration of the date of crossing the border (in earlier publications – in consideration of the date of receiving freight customs declarations).

Main indicators, which are taken into account in statistics of external trade, are the following.

External trade turnover – the sum of values of exports and imports for a certain period.

Exports of goods – exportation of goods from the country for sales on external market as well as re-export of foreign goods.

Imports of goods - importation from abroad of foreign goods intended for use inside the country and for re-export.

The customs statistics of our republic registers importation and exportation of goods on the basis of the «common» system of registration of external trade.

Volume of exports includes exports of national goods, exports of goods after processing, re-export of imported goods, exports from free customs zones and free warehouses, exports of goods from tax-free shops, and also goods exported for a lease for one year or more.

Main components of imports are imports of goods intended for use inside the country, imports of goods used for processing, re-imported goods, imports of goods being in free customs zones and in free warehouses; im-

ports of goods sent to a tax-free zone; goods imported for a lease for one year or more.

The following transactions are not taken into account by customs statistics: transactions with monetary gold, securities, banknotes and coins being in circulation; transit of foreign goods through the territory of the country; re-export of goods without delivery to the country; goods imported and exported temporarily; goods intended for official use of diplomatic and consular representative offices of foreign states; goods intended for support of combat readiness and daily activity of domestic military units dislocated outside the state; goods which are not commercial.

The geographical allocation of external trade flow is made under such sketch:

exports of goods – by country of destination (use) of goods

imports of goods – by country of departure of goods, since 1998 – by country of origin of goods.

Valuation of export goods is made on a FOB or DAF basis (the term of sales of goods under which in the value of goods are included the transaction value of the goods, costs of delivery and loading of goods on the board of a ship or delivery to the border of exporting country); CIF or CIP-type valuation (the term of sales of goods, according to which the value of goods includes the transaction value, costs of insurance and delivery of goods to the border of the exporting country) is used for import goods.

The balance of payments

The section includes the data compiled by the National Bank of the Republic of Kazakhstan on the balance of payments for the years 2007-2011.

The balance of payments of Kazakhstan is a systematic representation of all economic transactions between residents and nonresidents for a certain period.

The compilation and estimation of the balance of payments (BOP) is made on the basis of the methodology of the International Monetary Fund (IMF Balance of Payments Manual, 5th edition, 1993).

Main rules for compiling the BOP and definitions are as follows:

- recording of transactions between residents and nonresidents;
- recording of transactions according to the double-entry system;
- reflection of flows, not stocks;
- valuation of transactions and

transfer of the amounts, denominated in different currencies, using a unified recording unit;

- registration of transactions at the moment of changing the owner;
- recording of transactions by their type and sectors of the economy.

The double-entry system requires recording of transactions in the balance of payments by two equivalent values, one of which is designated as credit with a positive arithmetic sign, the other is recorded under debit with a negative sign. Positive values refer to the currency inflow, while the negative ones - to the outflows.

The sum of all credit entries should be equivalent to the sum of all debit entries, and net balance must be equal to zero. In practice the accounts frequently do not balance because the different sources of information and expert estimations are being used. Therefore, there is a balancing item "Net errors and omissions".

Use of the signs “+” or “-” in the balance of payments

Transactions	“ + ” Credit	“ - ” Debit
1. Current account		
Goods and services	Exports of goods and services	Imports of goods and services
Income	Receipts from nonresidents	Payments to nonresidents
Current transfers	Receipts from nonresidents	Payments to nonresidents
2. Capital & financial account and reserves		
Capital transfers	Receipts from nonresidents	Payments to nonresidents
Transactions with financial assets and liabilities	Inflow of financial assets (Increase of liabilities to nonresidents or decrease of claims on nonresidents)	Outflow of financial assets (Increase of claims on nonresidents or decrease of liabilities to nonresidents)

Valuation of transactions. The transactions are estimated at their actual market price, reflected in contracts and agreements between independent participants of the bargain.

Time of recording. The transactions with economic values are recorded at the moment when economic value is created, transformed, exchanged, transferred, or extinguished.

Resident and nonresident. Economic unit is a resident natural or legal person when it has a center of economic interest and lives more than one year in the economic territory of the country. The economic territory of a country consists of the geographic territory under the jurisdiction of the government; within this territory persons, goods and capital circulate freely, as well as of territorial enclaves located in other countries, such as embassies, consulates, military bases etc.

Types of transactions. The transactions are subdivided into transactions with real (goods, services, income, non-produced and non-financial assets) and financial resources. Main types of transactions are as follows:

- exchange of a real resource for a real (barter) or financial (non-cash settlement, credit etc.) resource, including creation of new financial claims or liabilities and their cancellation (debt forgiveness);
- exchange of some financial resources for other ones;
- payments or income receipts from the use of production factors (labor and capital);

- non-repayable transfers - granting of economic values by one party to another party without claims and receiving of economic values without liabilities. The transfers can be current and general ones. The movement of material and financial resources accompanying migration of the population refer to capital transfers.

Main items of the BOP

The balance of payments consists of the following main components: current account, capital operations account, financial account (including reserve assets).

Current account reflects transactions with goods and services, income and current transfers between residents and nonresidents. Covered in the **capital operations account** are transactions with capital transfers and nonproduced nonfinancial assets. **Financial account** consists of all transactions with financial instruments changing the international investment position.

The sub-accounts of the balance of payments sectors are interrelated. The positive balance in the sum under the current account and capital transfers means net increase of assets or net decrease of liabilities; on the contrary, the deficit results in net reduction of assets or net increase of liabilities to nonresidents. The structure of the balance of financial account and changes in net worth and liabilities indicates which financial claims and liabilities have been increased or decreased.

The above mentioned transactions are reflected in different items according to the next classification.

Goods. This item covers merchandise

trade, including goods for processing with subsequent re-import or re-export, repairs on capital movable goods like ships, goods acquired in ports by carriers, nonmonetary gold. In connection with non-coverage of the external trade transactions, the adjustments are made on coverage - the database is supplemented by the data on "shuttle trade", and on valuation of transactions - the barter is adjusted on exports and imports for "non-equivalent barter", as well as the c.i.f. import value is corrected into the f.o.b. import value, required according to the methodology, by deduction of the cost of freight and insurance services related to both residents and nonresidents. The cost of cargo transportation or freight through CIS countries is estimated as 7% of the cost of goods from the CIS countries, and for other countries as 14% of the cost of goods covered by official statistics.

Services cover all categories of services, in particular cargo and passenger transportation, tourism and other, including mainly technical assistance as consulting and educational services, geophysical, building, communication and government services and others.

Income consists of income from use of production factors - labour and capital; these are compensation of employees as well as income from direct, portfolio and other investment and reserves. Capital income is divided into dividends, interest and other income.

Current transfers. This item includes contrary entries of transactions with real and financial resources, received or provided as a grant without compensation of the economic value equivalent, such as, for example, humanitarian and technical aid. This item also covers government contribution into various international and interstate organizations, taxes and transfers of natural persons.

Capital transfers consist of those involving transfers of ownership, fixed assets and debt forgiveness without a quid pro quo. Such transfer of money resources is considered as capital transfers only in cases if these means are intended for acquisition of

fixed assets or capital construction.

Direct investment. Direct investor is an investor who has a profit share and owns not less than 10% of shares of the enterprises invested by him. Direct investment covers goods, property and financial resources. Direct investment in the balance of payments are classified as direct investment abroad, having an economic sense of assets (investment of residents into other economics), and direct investment into national economy, having an economic character of liabilities to nonresidents (investment of nonresidents into the given economy).

Portfolio investment. This category covers investment in corporate securities, including equity securities, the amount under which (profit share) is less than 10%, and government debt securities. Debt securities include bonds and reversal notes with maturity more than one year, money market instruments and financial derivatives.

Other investment include trade (commercial) credits, government and private loans, currency and deposits, as well as other assets and liabilities, including accounts receivable and payable related to contracts on deliveries of goods and services.

Reserve assets cover component of the balance of payments, which is very important for analysis of external transactions of the state. International reserves consist of external assets of the state, the transactions on which are carried out by the National Bank. They can be used for financing of the balance of payments deficit by interventions into the exchange market for regulation of the exchange rate and maintenance of stability of the national currency. Reserve assets consist of monetary gold, SDR, reserve position in the IMF, foreign exchange assets (currency, deposits and securities) and other claims. It is accepted to reflect in the balance of payments only those changes of gold stocks, which appeared as a result of transactions with monetary gold, i.e. purchase/sale of gold by another central bank or international financial organizations.

Balance of payments of the Republic of Kazakhstan

The balance of payments may be presented in standard and analytical form.

While presenting in analytical form, the components are grouped according to the purposes of the user.

7. REAL SECTOR OF ECONOMY

Agriculture

Agricultural enterprises include production enterprises created on these basis of former collective and state farms and other state enterprises (collective agricultural enterprises, joint stock companies, partnerships), subsidiary holdings of enterprises and organizations.

Households farms include personal subsidiary plots, collectively-owned gardens and kitchen gardens, as well as summer (dachas) plots.

Personal subsidiary plots are given to households in permanent or temporary ownership to grow crops or raise livestock.

Collective orchards and vegetable gardens represent such type of use, which allows citizens to grow fruit and vegetables for their needs.

Peasant (private) farm covers a group of persons joined together as a family or on the basis of labor who use agricultural lands for production of agricultural products as well as make processing and sales of these products.

Agricultural output is the value of outputs of plant-growing and animal husbandry at average weighted current prices of sales during a calendar year.

Volume of produce at constant prices is used for calculation of agricultural volume index.

Output of plant-growing includes the value of materials produced while harvesting in the current year, the value of young perennial plantations, and changes in the value of work-in-progress from the beginning to the end of the year.

Output of animal husbandry includes the value of raising and keeping of livestock, poultry and other animals, as well as production of milk, eggs, honey, etc.

Profitability (or loss) of produce sold by agricultural enterprises is measured by the ratio of profit to the cost of the produce sold.

Total land area is the land area includ-

ing internal waters within the state border.

Agricultural lands are the lands used to produce agricultural products. They comprise arable lands, lands under permanent crops, hayfields, and pastures.

Arable lands are the lands regularly cultivated and used under agricultural crops, including those under perennial grass, and also fallow lands.

Lands under permanent crops are those under perennial plantations, and nursery gardens.

Hayfields are the lands used for haymaking.

Pastures are the lands under natural or sown grass used for grazing, but not for haymaking.

Sown area is allocated among crops based on the economic use of their yield. The adjusted area is measured by adding up the area under remained winter crops, the area sown for spring crops and the remained mowing areas of perennial grass.

Gross harvest is estimated by measuring the harvest, taken and recorded, of main crops, and crops sown for the second time. Gross yield of grain and leguminous crops is shown weighted after treating, i.e. weight excluding farm waste and shrinkage.

Livestock number as of 1st January is estimated based on annual enumerations of livestock and covers all age groups of the enumerated livestock.

Sales of livestock and poultry (meat output) include all types of livestock and poultry slaughter sold to the state, consumer cooperatives, through farmers' markets, own trading network and public catering enterprises, exchanged as barter.

Milk output is measured irrespective of whether it was sold or consumed by the farms for feeding calves or piglets. Milk consumed by sucking calves is excluded from total output and is not recorded while estimating average milk yield per cow.

Average annual milk yield per cow is

calculated on the basis of the average number of cows at the beginning of a year and of each reference period. While measuring milk yield per cow in agricultural enterprises, cows on an intensive feeding, beef cows intended for slaughter, and cows separated from the stock for feeding of younger animals are excluded from the total number of cows owned by the agricultural enterprises.

Eggs production covers eggs collected during a year from all kinds of poultry, including those used for incubation, production of eggs powder and other purposes.

Since 2001 the data on consumption of main foodstuffs refer to a sample survey of 12000 households and are calculated as average per one member of household.

Main indicators on agriculture

Poultry	14 092,6	14 346,5	14 397,7	14 341,3	13 442,5

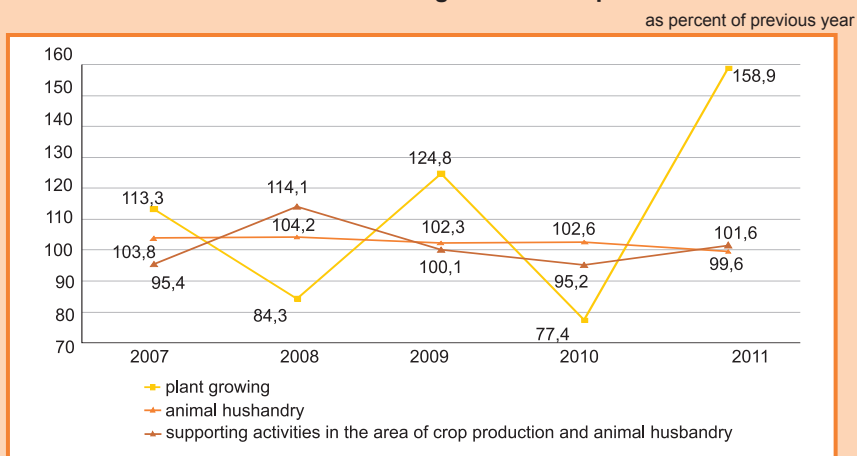

7.18 Litter and murrain of livestock
agricultural enterprises

	2007	2008	2009	2010	2011
Litter in terms of 100 dams, heads:					
calves	81	81	75	78	75
lambs and kids	87	89	87	84	86
piglets	1 319	1 469	1 442	1 252	1 446
Murrain of livestock, percent:					
cattle	2,1	2,1	1,7	1,6	1,7
sheep and goats	4,8	4,5	3,7	4,7	4,1
pigs	11,0	10,3	12,6	10,5	9,0

7.19 Productivity of livestock and poultry in farms of all types

	2007	2008	2009	2010	2011
kilograms					
Average weight of one head of livestock sold for meat:					
cattle	306	303	300	299	301
sheep and goats	37	38	37	94	96
pigs	99	93	94	37	37
Milk yield per cow	2 205	2 253	2 233	2 255	2 211
Average annual wool clip per sheet	2,9	2,9	2,8	2,8	2,5
Average annual egg-laying ability of laying hens, pieces	198	208	217	215	214

Volume indices of agricultural output

Structure of production of main agricultural products by types of farms

Changes of gross harvest indices of main plant-growing products in farms of all types

as percent to previous year

Changes of production indices of main animal husbandry products in farms of all types

as percent to previous year

Industry

This section contains data characterizing changes in the industrial production as a whole and by largest economic activities, production of key industrial products.

Volume of industrial products for the whole industry and for its individual branches is measured as a sum of data in value terms related to the output of industrial goods produced, industrial goods and services produced by legal entities and their independent subdivisions irrespective of their kinds of ownership. Data on the output of products are given at current prices of the corresponding year. Aggregate data on the output of industrial products in value terms include data on the output of products (goods, services) produced by large, medium and small enterprises, industrial subdivisions of non-industrial organizations (agricultural, trade, construction etc.), as well as the output of products produced in households' sector. The output of an industrial enterprise is measured with the "factory" method excluding the value of the inner factory turnover, which is defined as part of finished and semi-finished goods consumed by an enterprise for own industrial and production needs.

Volume index of industrial production is a relative indicator characterizing changes in the volume of material assets produced in comparable periods. There are individual and aggregate volume indices of industrial production. Individual indices reflect changes in the output of a particular product and are calculated as relation of outputs of the product in physical terms in the periods chosen for comparison. The aggregate volume index of industrial production is calculated for the whole number of economic entities on the basis of natural indicators.

For calculation of the volume index is used the method based on data related to the dynamics of indicators of industrial production in physical terms for a definite set of goods with the further aggregation into branch and total industry's indices. Average annual prices of the previous year are taken as constant prices. To construct a time series the chain index is applied. Products are valued at constant prices directly at enterprises on the basis of producer prices. Prices excluding value added tax and excises are used when calculating volume indices.

Output of products in physical terms is measured, as a rule, by recording the gross output of products, including goods used for own needs of the enterprise and also those processed under contracts. In latter cases raw materials belong to customers and are transferred to other enterprises to be processed under contracts concluded.

Production capacity is defined as the highest possible output of listed assorted products (per year, day, shift) or output and processing of raw materials produced. It is measured based on full use of operating mode of production equipment and production space.

Production capacity balance characterizes the production capacity of particular products, its changes and the level of use.

The capacity ratio is used to measure the extent of use of the production capacity to produce particular types of products. It is calculated by relating the actual output to average annual capacity for the reporting period.

See the definition of indicators characterizing financial results of the economic activity of enterprises in the section "Finances and credit".

7.20 Main indicators of industry

	2007	2008	2009	2010	2011
Volume of industrial production, bln. tenge	7 856,5	10 194,7	9 121,5	12 105,5	15 929,1
Volume index of industrial production, as % of previous year	106,2	102,6	102,7	109,6	103,8
Number of industrial enterprises and manufacturing	13 394	12 065	11 329	11 252	11 441

7.23 Output of products in physical terms by types of economic activity

	2007	2008	2009	2010	2011
1. Mining					
Mining of coal and lignite					
coal, thsd. tons	98 384	111 072	100 854	110 929	116 449
coal, thsd. tons	87 981	101 177	91 042	99 285	103 015
lignite, thsd. tons	4 370	4 777	5 084	7 283	8 368
Extraction of crude petroleum and oil-well gas					
crude petroleum, thsd. tons	55 265	58 646	64 354	68 084	67 765
gas condensate, thsd. tons	11 860	12 025	12 128	11 600	12 296
Extraction of natural (fuel) gas					
natural gas, mln. cub. m	29 562	32 889	35 942	37 406	39 531
Mining of iron ores					

	2007	2008	2009	2010	2011
iron ore, thsd. tons	49 555	44 847	46 248	50 190	51 742
iron rolled briquettes, thsd. tons	8 572	6 952	6 182	8 150	7 803
Mining of non-ferrous metal ores					
copper ore, thsd. tons	31 266	32 566	30 594	32 039	34 396
zinc-lead ore, thsd. tons	8 570	7 809	6 447	6 722	7 281
lead in a lead concentrate, thsd. tons	40	39	34	35	39
copper in a copper concentrate, thsd. tons	407	422	406	381	405
zinc in a zinc concentrate, thsd. tons	386	387	398	405	377
aluminum ores (bauxites), thsd. tons	4 963	5 160	5 130	5 310	5 495
manganese ore, thsd. tons	2 482	2 485	2 457	3 045	2 963
chromite ore, thsd. tons	4 590	4 207	4 678	5 092	5 059
chromite concentrates, thsd. tons	3 456	3 203	3 381	3 502	3 670
Other branches of mining					
natural sands, thsd. cub. m	7 480	5 765	5 030	5 956	7 209
granules, chippings and powder of st one; pebbles, gravel, broken or crushed stone, thsd. cub. m	41 068	26 053	24 164	25 888	31 538
raw phosphate crushed, thsd. tons	152	207	170	289	211
phosphate fine grinding, thsd. tons	78	154	85	124	189
salt and net sodium chloride, tons	160 560	438 047	222 942	276 131	364 222
asbestos, thsd. tons	293	230	230	214	223
2. Manufacturing					
Manufacture of food products, including beverages and tobacco					
meat and edible offal of bovine animals, swine, goats, horses, camel and meat of poultry, tons	112 348	113 526	129 263	157 177	164 934
sausages, tons	38 328	39 983	42 209	35 300	35 584
butter, tons	19 707	16 598	15 341	14 000	14 577
cheese and curds, tons	17 154	15 473	15 591	16 342	17 595
processed liquid milk and cream, tons	261 128	265 508	250 684	294 957	338 505
sugar, tons	392 261	508 496	384 576	363 836	271 536
cereal and vegetable flour; mixes thereof, thsd. tons	2 756	2 449	3 794	4 474	4 664
goats, meal and pellets and other grain products, tons	40 235	43 228	40 742	50 162	40 998
ready forages for agricultural animals, tons	459 305	352 696	304 044	397 728	445 428
fresh bread, tons	695 491	655 161	659 629	736 692	731 689
chocolate, chocolate and sugar confectionery, tons	77 594	77 052	90 204	96 486	102 437
macaroni, noodles, cusses and similar flour products, tons	110 899	111 307	112 808	124 054	145 708
vodka and drinking spirit of alcoholic strength 45,4%, thsd. liters	49 871	45 027	39 171	45 358	40 366
liquor, thsd. liters	189	55	6	2	-
brandy (cognac), thsd. liters	6 115	4 293	4 537	5 076	5 006

	2007	2008	2009	2010	2011
natural grape wine, thsd. liters	9 131	5 361	4 376	3 997	2 967
"champagne" type wine, thsd. liters	2 235	1 321	1 703	1 655	1 031
beer, thsd. liters	410 960	361 163	361 534	495 174	425 795
non-alcoholic beverages, thsd. liters	648 823	650 189	586 191	713 651	771 717
mineral waters and aerated waters, not sweetened nor flavored, thsd. liters	463 405	443 478	443 649	422 198	435 305
cigars, cheroots (cigars with the cut offends), cigarillos (thin cigars) and cigarettes, gaspers of tobacco or tobacco substitutes, mln. pieces	31 507	28 483	26 789	24 228	25 222
Textile and sewing industry					
cotton fibre carded or combed, tons	110 471	133 348	97 062	91 404	75 544
wool yarn carded or combed, not put up for retail sale, tons	148	79	134	70	54
cotton yarn of fibre carded or non-carded, not put up for retail sale, tons	11 578	12 661	8 679	10 404	3 474
fabrics, thsd. m ²	43 325	43 480	35 491	36 840	19 192
fabrics from card wool, thsd. km ²	75	76	156	33	-
flax fabrics, containing less than 85% on flax mas with the addition of cotton, thsd. km ²	2,9	-	-	-	-
cotton fabrics, except special fabrics thsd. m ²	42 423	42 014	35 335	35 435	19 192
fabrics except special fabrics, from chemical fibres, thsd. km ²	460	396	-	-	-
file cloth, terry-cloth and other special fabrics, thsd. km ²	365	994	-	1 372	-
socks, knitted or crocheted, thsd. pairs	1 911	1 847	1 234	2 539	2 068
jerseys, pullovers, cardigans, waistcoats and similar articles, knitted or crocheted, thsd. pieces	207	223	98	95	60
Manufacture of leather, product of leather and manufacture of footwear					
leather, of bovine or equine animals, sheep, goat and swine, without hair, thsd. dm ²	202 728	286 731	244 976	99 320	64 148
footwear with uppers of leather, thsd. pairs	508	532	623	631	786
Treatment of wood and manufacture of wood products					
wood, sawn or chipped length wise, sliced or peeled, > 6 mm thick; railway or tramway sleepers of wood, not impregnated, thsd. m ³	111	99	89	280	207
windows, french windows and their frames, doors and their frames and thresholds, of wood, thsd. m ²	708	672	642	1 156	1 320

	2007	2008	2009	2010	2011
parquet panels, shuttering for concrete construction work, shingles and shakes, of wood, thsd. m ²	25	41	6	4	1
Manufacture of paper and paper board; publishing					
corrugated paper and paper board, perforated or non-perforated in rolls or sheets, tons	38 005	35 853	73 740	67 262	18 236
handkerchiefs, napkins and cosmetic towels of paper mass, paper, cotton cellulose or linen of cellulose fibers, kg	2 855 405	3 250 225	3 214 232	3 883 332	4 071 745
boxes, and bags of paper or of corrugated cardboard, tons	68 135	60 061	56 758	67 606	63 667
toilet paper, tons	7 968	9 512	15 979	9 122	11 754
Manufacture of coke, refined petroleum products and nuclear materials					
coke and semi-coke of coal, of lignite or of peat; retort carbon, thsd. tons	2 925	2 687,7	2 552	2 527	2 663
refined petroleum products, thsd. tons	11 384	11 791	11 717	12 794	13 393
motor spirit (including aviation gasoline), thsd. tons	2 633	2 505,2	2 613	2 926	2 775
kerosene, including kerosene type jet fuel (refining temperature of 150-300 degrees centigrade), thsd. tons	385	402	374	491	387

Construction

Construction organization comprises all ordinary construction and special organization, included repair-construction organization setting in operation or making adjustment works organization. The main economic activity of construction organizations consists in carrying out contract works related in accordance with “General classifier of all economic activities” to the branch “construction”.

The volume of contract works is a cost of the works for construction of new fixed assets and also extension, reconstruction and technical modernization of acting fixed assets, capital repair and other contract works (start-and-adjustment, hydraulic fill, over-burden, crop and technical works and others).

Trade

The section covers statistics characterizing volume of retail and wholesale trade turnover, services.

The retail trade turnover includes sales of goods through all retail trade outlets and is measured as volume of sales of goods to households by officially registered trade and public catering enterprises at food, non-food, specialized, universal markets, by individual proprietors.

The volume of sales of goods at markets and by sole proprietors is measured based on sampling surveys of natural persons.

The wholesale turnover is a turnover of commodity sales into sphere of commodity circulation, i.e. for further sales.

Volume of services includes the revenues of producers of services received in payment for services, rendered to enterprises and population.

Transport

The section contains data on the performance of transport and communication.

Transport of the Republic of Kazakhstan is the registered on its territory railway, motor (freight road, bus, taxi), city electric (tram and trolley-bus), pipeline, river and air transport.

Transportation of goods refers to the quantity of cargo in tons carried by transport. This is considered by modes of transport, communications and cargo nomenclature.

For all modes of transport, except for motor and air, the volume of goods carried is recorded by departure time.

Freight turnover is a volume of transport works on cargo shipment, expressed in ton/kilometers. It is defined as a sum of values produced by multiplying the weight of each cargo shipment (consignment) of the transported cargo by the length of its transportation.

Transportation of passengers relates to the number of passengers carried within

a certain period of time. This is considered by modes of transport and communications.

Passenger turnover is a volume of transport works on passenger transportation, expressed in passenger/kilometers. It is defined as a sum of values produced by multiplying the number of passengers for each position of transportation by the distance of their transportation.

Transportation mode is a feature characterizing participation of the transport network subdivisions in transportation. Transportation is divided into **international** to the countries of far abroad and CIS, **intercity** within the Republic, **suburban** and **inside city** transportation. The main transportation modes are **bus** transport and **passenger taxi**, and for intercity communication - **tram** and **trolley-bus** transport.

Communication includes receipt, collection, processing, accumulation, transfer (transportation), delivery, dissemination of information, postal and special dispatches.

8. FINANCIAL SYSTEM

State finances

State finance statistics represents income and expenditures of general government.

Information base of the state finance statistics is formed using the reports on the execution of state, republican and local budgets submitted by the Ministry of Finance of the Republic of Kazakhstan.

State budget is the main financial instrument of formation and spending of monetary resources for ensuring fulfillment of government functions. State budget includes republican and local budgets.

Budget income is the total of tax and non-tax receipts and fees as well as irrevocable budget capital income.

Tax income covers compulsory, irrevocable, unrecoverable payments to the budget. They also include fines and penalties paid for violation of tax legislation.

Non-tax income includes compulsory payments - property income, dividends on shares and other securities, external economic activity income.

Income also includes official transfers (grants), which represent money resources irrevocably transferred by foreign states or international organizations for supporting the budget or other purposes connected with state functioning.

Budget expenditures refer to money resources allocated from the budget on unrecoverable basis within voted budget. Expenditures are formed for the following purposes: funding of economic branches (industry, agriculture, construction, transport and communications), funding of social and cultural development, science; for maintenance of government and administrative authorities and law-enforcement bodies; expenditures for national defense and external economic activity; state debt service expenditures, etc.

Operational balance is defined as a difference between budget income and expenditures.

Net budget crediting is a difference between budget credits and repayment of budget credits.

Financial assets transaction balance is defined as a difference between purchase of financial assets and returns from sales of government financial assets.

Budget deficit (profit) is equal to operational balance with the deduction of net budget crediting and financial assets transaction balance.

The obtained negative value is considered as budget deficit, and the positive one refers to budget surplus.

Insurance contributions and pension accruals

Securities

Security is a set of definite records and other entries certifying the property right.

Government emission security is an emission security which certifies the right of the owner for loans that are borrowed by the Government of the Republic of Kazakhstan or the National Bank of the Republic of Kazakhstan.

Non-government emission securities include shares, bonds and other emission securities that are not government emission securities.

Share is a security issued by the joint-

stock company which certifies the right for participation in the management of the joint-stock company, receipt of share dividends and part of the company's property when liquidated as well as other rights stated in the Law and other legislative acts of the Republic of Kazakhstan.

Bonds are the securities confirming the obligation of the issuer to compensate to the owner of the security its face value in scheduled period and giving the right to the owner for receiving a fixed interest from the face value.

Finances of enterprises

Finances of enterprises and organizations, payments between economic entities

Enterprises (organizations) finance statistics includes indicators of financial state of enterprises (organizations). Data are collected from the state statistical forms and book-keeping reports.

Income from main activity represents net financial balance and can be defined as the difference between gross income from main activity and expenses of the period.

Income from sales of goods and services is recorded after deduction of the value added tax, excises, as well as cost of goods returned, discounts on sales and on consumer prices. The data on income at current prices refer to large and medium enterprises .

Profitability of enterprises (organizations) characterizes the efficiency of their activity. It is calculated as a ratio between value of income (losses) from ordinary activity and cost of production, taking into account expenses of the period .

Debtor indebtedness of enterprises is defined as indebtedness of customers for goods shipped, works done and services rendered, including those covered by bills and advances; compensation of material damage, etc.

Debt on liabilities is defined as debts to suppliers for goods shipped, works done and services rendered, including those covered by given bills and advances; compensation of material damage. Besides, debt on liabilities includes debt of enterprise on all

kinds of budget payments, on compensation of employees and other payments, on payments to the state non-budget funds, loans of banks and non-bank organizations.

Overdue indebtedness on compensation of employees and other payments

refer to the total sum of the overdue indebtedness on compensation of employees and other payments to employees, including carry-over residual debts of the previous period, which are not discharged on the reporting date.
