-- the phenomenon is absent
0,0 - insignificant value
x - data is confidential
... - no data

In some cases, minor discrepancies between the total and the sum of the terms are due to rounding of the data.

Preface

«Wholesale and foreign trade prices in the Republic of Kazakhstan» compilation contains data on the level and dynamics of prices for wholesale goods, and changes in prices for foreign trade products.

Summary data on wholesale and foreign trade price movements are given in the dynamics by product group over five years. Information for 2020 is reflected by month and quarter.

The data on the level and price indices of wholesale trade are presented in the context of regions and in the republic, foreign trade - in the republic in the form of tables and diagrams. Since 2016, foreign trade price indices have characterized the change in the prices of foreign trade transactions, expressed in tenge (in previous years - in US dollars).

Prices by region and / or production channel are not published if they are represented by one or two base enterprises.

The publication is intended for senior management personnel, economists, statisticians, employees of management bodies and financial and economic services of enterprises, organizations, scientific, entrepreneurial and banking workers, faculty, students of economic universities, other specialists, the media.

Methodological notes

The price index of export deliveries of goods, products characterizes the change in prices for goods produced in the republic and exported to other countries.

The price index of import receipts of goods, products characterizes the change in prices for products purchased in countries of the world community for the needs of the republic.

Monitoring of changes in foreign trade prices is conducted on a sample frame of basic objects, goods, products.

Since 2016, foreign trade price indices are calculated on the basis of national statistics on the prices of exporters, importers (form 1-P (export, import)), on mutual trade in goods with member states of the Eurasian Economic Union (form 1-TS) and customs statistics presented in tenge.

When calculating price indices for observed goods separately for export and import, for groups of countries (near and far abroad), the Laspeyres formula is used, which uses the data of the structure of foreign trade turnover in value terms.

Wholesale prices of goods, products include VAT, commodity circulation taxes and other indirect taxes, but do not include the costs of delivering goods to consumers.

Monitoring of change in wholesale prices of goods, products is conducted on a sample frame of basic wholesale objects.

The wholesale price index of goods, products characterizes the change in prices of goods, products sold by wholesalers to various users for their further professional use or their subsequent resale in retail.

The wholesale price index of goods, products is calculated by type of product. The resulting indices are aggregated by class, group, section, type of economic activity and wholesale trade in general.

For the calculation, the Laspeyres formula is used, which allows calculating the wholesale price indices of goods, products using the appropriate weighing base, which uses data on the volume of wholesale sales of goods in value terms.

$$I_{on} = \frac{\sum_j \left[\frac{P_{nj}}{(P_n - 1j)} * (P_n - 1j Q_{oj}) \right]}{\sum_j [P_{oj} Q_{oj}]} * 100$$

$$\text{where: } P_n - 1j Q_{oj} = P_{oj} Q_{oj} * \frac{P_{1j}}{P_{oj}} * \frac{P_{2j}}{P_{1j}} * \dots * \frac{P_{n-1j}}{P_{n-2j}}$$

I_{on} - index for the period "n" compared with the basis of "o",

P_{oj} - the price of goods j in the base period "o",

P_{nj} - the price of the goods j in the period "n",

Q_{oj} - the quantity of goods j in the base period «o».
