2. Integrated parameters of human development

Gross domestic product in the production phase is determined by summing up the gross value added by industry. Gross domestic product is calculated at market prices, includes net taxes on products and imports. It is one of the most important indicators of the system of national accounts, characterizing the final result of economic activity of the country.

3. Demographic characteristics

This section contains statistical data on the size of the population split by women and men, number of births, deaths, including by causes of death, migration flows.

In the section, there are also some other figures that overview demographic indicators characteristic of reproduction process in the population on the overall, and life expectancy at birth, summary birth rate.

Data on number of births and deaths is based on an annual statistical processing of information, collected from civil acts, prepared by RACS (Register of Acts of the Civil Status). Number of births is comprised only of born alive.

Live birth – is a complete exile or ejection of a product of conception from mother's body without dependence from duration of pregnancy, after such being separated the foetus can breath and show other signs of a life, such as palpitation, the pulsation of an umbilical cord or obvious movements of any muscles irrespective of whether the umbilical cord is cut and whether has separated a placenta.

Life expectancy at birth is a number of years that one person will live on average, provided that throughout the lifetime of this generation the rate of mortality at each age remains the same as during years when the indicator was calculated.

The birth rate by age groups is calculated as the relation of number of births in the year at women of the given age group to mid-annual number of women of this age.

The summary birth rate indicates the number of children an average women would give birth to throughout the entire reproductive period keeping the birth rate at each age the same as in the year when the coefficient was calculated. Its magnitude does not depend on the age composition of population and is characteristic of the average birth rate in a given calendar year.

Reproductive period (age) - time period during which the woman is capable to a child-bearing. For the statistical purposes in the majority of the countries conditionally accepted period of 15-49 years.

The mortality rate by death causes is calculated as a ratio of number of deaths by shown causes of death divided by an average annual number of the population according to current assessment (calculated per 100 000 people of the relative sex).

Maternal mortality is a number of female deaths caused by pregnancy complications, delivery and post-natal period complications per 100 000 live-born children.

Infant mortality – number of children's death aged less than 1 year per 1 000 born.

Migration of population - the movement of people (migrants) across the borders of a region with a change of residence. The number of arrivals and departures is determined by the development coming from the application services of the Justice (citizenries) and the migration police of the structure of internal affairs (foreigns and stateless persons) tickets statistical records of arrival and departure, which are produced simultaneously with the address forms in the registration of the population place of residence.

In the current statistical record is now tentatively fixed number of arrivals (persons) and departures (persons), in reality we are talking about the numbers of arrivals and departures.

6. Education and science

This section contains information about the level of literacy of the population, the level and accessibility of education, the distribution of women and men trained by type of educational institutions, as well as by groups of specialties. The section also includes the main indicators in the fields of science, information on the number of people with an academic degree, the level of computer literacy and more.

The number of educational institutions includes schools, gymnasiums and high schools implementing primary and secondary education programs. Gymnasiums provide an in-depth profiled differentiated education of students, in secondary schools are carried out professionally-oriented teaching pupils of the senior level.

Providing (coverage) children with permanent pre-school organizations. The index is defined as the ratio of the number of children attending pre-school organizations, and the number of children aged 1-6, according to statistics of demography, adjusted for the number of children of 5-6 years enrolled in school.

Provision of seats for children in pre-school in situations (children per 100 seats) is the ratio of children in preschool in situations to the number of seats in them. The result is multiplied by 100.

The overall cover age. The number of students enrolled at this level of education in educational institutions, regardless of age, expressed as a percentage of the population of theoretical age group of the population.

Net coverage rate. Number of pupils of theoretical age group of this level of education, studying at this level, as a percent ratio to aggregate number of population of this age group.

Preparation of scientific and pedagogical personnel in the country is carried out by scientific organizations and higher education institutions with master's degree, postgraduate and/ or doctoral studies.

Master (post-graduate, doctoral) - is the main form of training of scientific and pedagogical personnel - masters, candidates (doctors) of sciences on the most important areas of science and technology, PhD (PhD).

Research and development - research activity which is carried out on a systematic basis in order to increase the amount of scientific knowledge and to find new areas of their practical application.

The structure of research and development includes fundamental, applied research and technological development. Grouped by type of work as fundamental, applied research, development.

Personnel engaged in research and development - a set of individuals whose creative work is undertaken on a systematic basis, aims to increase the amount of scientific knowledge and the search for new fields of application of that knowledge, as well as employees providing direct services related to the implementation of research and development. Personnel engaged in research and development is treated as a payroll of employees of organizations (relevant departments of higher educational institutions, industrial enterprises and others.) engaged in research and development.

7. Employment and unemployment

This section contains information on the main indicators of the labor market, the number of employed population by employment status and economic activities, as well as engaged in harmful and dangerous conditions, the distribution of the unemployed by age and education. Data on average monthly nominal wage of employees.

Economically active population (labour force) – part of the population at the certain age defined to measure economic activity of the population providing labour force supply to manufacture products and to render services. Economically active population includes all employed individuals in all types of economic activities and unemployed.

Level of economic activity – share of economically active population to the entire population aged 15 and older, measured in percent.

Employed (working) population – all individuals at the certain age who according to their status for the short defined period of one week could be referred to one of the categories:

- a) Employed (paid) worker;
- b) Self-employed worker.

Employed (paid) worker - individuals contracted through a service agreement, a contract stipulating terms of payment in a form of salary, premium, raise etc., or in-kind payment.

Self-employment- unemployment in which there remuneration is directly depend on income generated from the production (realization) of goods and services (where own consumption is considered as part of income).

The unemployed are persons specified for measuring the economically active population, which in the period under review at the same time are responsible for three main criteria: were without work (did not have gainful employment), actively engaged in the search, were ready to get to work for a certain period of time.

Level of unemployment - ratio of unemployed to the number of economically active population, assessed in percent.

Number of employees working under hazardous and dangerous work conditions includes workers who have at least one industry factor exceeding MAC (maximum allowed concentration of chemical substance and industrial dust) at their working places or MAL (maximum allowed level of element), identified by sanitary regulations.

Wages and salaries – remuneration of labour according to complication, quantity and quality.

Average monthly nominal wages and salaries of one employee are calculated by dividing the accrued labour remuneration fund to the actual number of employees and number of months in the reporting period.

8. Small and medium entrepreneurship

This section contains information about the number of registered and active small and medium businesses, including women-headed; the number of employees at small and medium businesses across regions and economic activities. Data of JSC «Entrepreneurship Development Fund «Damu» fund for ongoing activities in the field of microcredit to women entrepreneurs is shown

Summary of registered and active small and medium enterprises formed on the basis of the Statistical Business Register and Agricultural Statistical Register, which contains data on legal entities, individual entrepreneurs and rural (farm).

Information about the active subjects and the number of employees in the individual enterprise is given on the basis of the Tax Committee of the Ministry of Finance.

Legal entity – organisation, that has in the eyes of the law, the capacity to make a contract or an agreement and the abilities to assume an obligation and to pay off its debts. A legal entity, under the law, is responsible for its actions and can be sued for damages.

Small business entities are individual entrepreneurs without a legal entity with annual average number of employees not more than fifty persons and legal entities engaged in private entrepreneurship, with an annual average number of employees not more than fifty persons, and the average value of assets for the year which is not over sixty thous and fold monthly calculation index established by the law on the national budget for the relevant financial year.

The subjects of the medium entrepreneurship are individual entrepreneurs without legal persons and legal entities engaged in private enterprise, not related to the small and large businesses.

Individual entrepreneurship-initiative activity of individuals aimed at obtaining income, based on the property of individuals themselves and carried out on behalf of individuals, their risk and under their property liability. The state registration of individual entrepreneurs is carried out by the tax authorities.

Farms (peasant) are recognized as a family-labor association of persons in which the implementation of individual business is inseparably connected with the use of agricultural land for agricultural production, as well as the processing and marketing of these products.

9. Crime

This section contains data on different types of crime, on individuals who have committed felonies and were convicted and also information on number of registered crimes against women and juveniles.

The section used the data of the Committee on Legal Statistics and Special Records of the General Prosecutor of the Republic of Kazakhstan.

Crime represents asocial-legal phenomenon comprising crimes committed in a particular area for a certain period of time and having qualitative and quantitative indicators

Registered crime-detected and officially registered as the socially- dangerous act for which the criminal law prescribes liability.

Number of convicted individuals includes those who charged and found guilty by court judgments that have come into the force.

Domestic violence – an intentional wrongful act (action or inaction) of a single person in the area of the family relations on the other (s) causing or threatening to physically contain and (or) mental suffering.

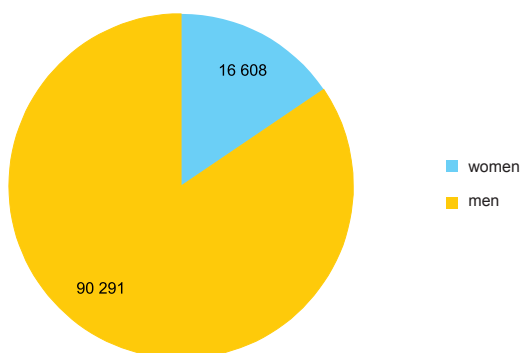

As part of the Law of the Republic of Kazakhstan «On Prevention of Domestic Violence», domestic violence can take the form of physical, psychological, sexual and (or) economic violence.
