2. INTEGRATED PARAMETERS OF HUMAN DEVELOPMENT

The total internal product at a stage of manufacture is determined by summation of total added cost on branches. The total internal product pays off for the market prices, that is includes the pure taxes to products and on import. It - one of major parameters of system of the national accounts describing final result of economic activity of the country.

3. DEMOGRAPHIC CHARACTERISTICS

This section contains statistical data on the size of the population split by women and men, number of births, deaths, including by causes of death, migration flows.

In the section, there are also some other figures that overview demographic indicators characteristic of reproduction process in the population on the overall, and life expectancy at birth, summary birth rate.

Data on number of births and deaths is based on an annual statistical processing of information, collected from civil acts, prepared by RACS (Register of Acts of the Civil Status). Number of births is comprised only of born alive.

Live birth – is a complete exile or ejection of a product of conception from mother's body without dependence from duration of pregnancy, after such being separated the foetus can breath and show other signs of a life, such as palpitation, the pulsation of an umbilical cord or obvious movements of any muscles irrespective of whether the umbilical cord is cut and whether has separated a placenta..

Life expectancy at birth is a number of years that one person will live on average, provided that throughout the lifetime of this generation the rate of mortality at each age remains the same as during years when the indicator was calculated.

The birth rate by age groups is calculated as the relation of number of births in the year at women of the given age group to mid-annual number of women of this age.

The summary birth rate indicates the number of children an average women would give birth to throughout the entire reproductive period keeping the birth rate at each age the same as in the year when the coefficient was calculated. Its magnitude does not depend on the age composition of population and is characteristic of the average birth rate in a given calendar year.

Reproductive period (age) - time period during which the woman is capable to a child-bearing. For the statistical purposes in the majority of the countries conditionally accepted period of 15-49 years.

The mortality rate by death causes is calculated as a ratio of number of deaths by shown causes of death divided by an average annual number of the population according to current assessment (calculated per 100 000 people of the relative sex).

Maternal mortality is a number of female deaths caused by pregnancy complications, delivery and post-natal period complications per 100 000 live-born children.

Infant mortality – number of children's death aged less than 1 year per 1 000 born

Migration of population - the movement of people (migrants) across the borders of a region with a change of residence. The number of arrivals and departures is determined by the development coming from the application services of the Justice (citizenries) and the migration police of the structure of internal affairs (foreigns and stateless persons) tickets statistical records of arrival and departure, which are produced simultaneously with the address forms in the registration of the population place of residence.

In the current statistical record is now tentatively fixed number of arrivals (persons) and departures (persons), in reality we are talking about the numbers of arrivals and departures.

6. EDUCATION AND SCIENCE

The section contains information on literacy level of the population, level of education, distribution of educated women and men by types of educational institutions, and also by types of specialisation. Also there are included the key indicators in the science, information about the population having a degree, the level of computer literacy, and more.

Secondary educational institutions include high schools, gymnasiums and lyceums which implement primary and additional educational programmes. Gymnasiums provide advanced profile differentiated education of students, lyceums are oriented towards professional education of senior students.

Children under pre-elementary education. The rate is defined as ratio of number of children at infant schools to number of children aged 1-6 according to demography statistics data, corrected to number of children aged 5-6 studying at schools.

Places provided to children at infant schools (number of children for 100 places) is defined as ratio of number of children at infant schools to number of places at schools. Result is multiplied by 100.

Aggregate coverage rate. Number of pupils, studying at this educational level in institutions, independently of age, as a percent ratio to the number of population of theoretical age group of this level of population.

Net coverage rate. Number of pupils of theoretical age group of this level of education, studying at this level, as a percent ratio to aggregate number of population of this age group.

7. EMPLOYMENT AND UNEMPLOYMENT.

The sections contains data of basic indicators of labour market, number of employed population by types of employment and areas of economical activity, including employees at harmful and injurious industries, distribution of unemployed population by age and education. Data on average monthly nominal salary of employees is provided.

Economically active population (labour force) – part of the population at the certain age defined to measure economic activity of the population providing labour force supply to manufacture products and to render services. Economically active population includes all employed individuals in all types of economic activities and unemployed. All citizens aged from 15 to 63 (men) and 58 (women) are deemed able-bodied individuals according to the Law of the Republic of Kazakhstan On Labour in the Republic of Kazakhstan and to the law On Provision of Pensions to Citizens in the Republic of Kazakhstan.

Level of economic activity – share of economically active population to the entire population aged 15 and older, measured in percent.

Employed (working) population – all individuals at the certain age who according to their status for the short defined period of one week could be referred to one of the categories:

Employed (paid) worker;

Self-employed worker.

Employed (paid) worker - individuals contracted through a service agreement, a contract stipulating terms of payment in a form of salary, premium, raise etc or in-kind payment.

Self-employment – employment where the size of salary pro rato depends from the income received from manufacturing (sale) of goods and services (where self – consumption is deemed as part of income).

Unemployed are people of a certain age, which was set to assess economic activity of the population, who at the determined period of time meet three primary criteria simultaneously: remained unemployed (with no sources of profit), were seeking job, and were willing to commence working immediately within a certain period of time**.**

Level of unemployment - ratio of unemployed to the number of economically active population, assessed in percent.

Number of employees working under hazardous and dangerous work conditions includes workers who have at least one industry factor exceeding MAC (maximum allowed concentration of chemical substance and industrial dust) at their working places or MAL (maximum allowed level of element), identified by sanitary regulations.

Wages and salaries – remuneration of labour according to complication, quantity and quality.

Average monthly nominal wages and salaries of one employee are calculated by dividing the accrued labour remuneration fund by the number of persons actually worked.

9. CRIME

This section contains data on different types of crime, on individuals who have committed felonies and were convicted and also information on number of registered crimes against women and under age.

The data provided by the Committee for Juridical Statistics and Special Accounting of the Office of the General Procurator of the Republic of Kazakhstan is used in this section.

Crime represents a social-juridical phenomena including felonies, committed on a certain territory in a certain period of time and characterised by qualitative and quantitative indicators.

A registered crime is a revealed and an officially registered publicly dangerous act that is subject for punishment by the criminal legislation.

A number of convicted individuals include those charged and found guilty by court judgements that have come into force.

Domestic violence – an intentional wrongful act (action or inaction) of a single person in the area of the family relations on the other (s) causing or threatening to physically contain and (or) mental suffering.

Within the framework of the Law of the Republic of Kazakhstan “On Prevention of Domestic Violence” domestic violence may be expressed in the form of physical, psychological, sexual and (or) economic abuse.
