Symbols:

- no phenomenon

0,0 - insignificant value

x - data are confidential

"-" - data are absent

In some cases insignificant discrepancies between the total and the sum of summations are explained by rounding data rounding.

## Foreword

The collection contains various tabular and graphic materials on the branch "Agriculture, forestry and fishery", on the number of agricultural producers, data in dynamics on gross output of products (services) of agriculture, forestry and fishery, sown areas of main crops, number of livestock and poultry, production and realization of agricultural products, volumes of production (services) in hunting, forestry and logging, fishing and aquaculture. The collection is intended for a wide range of users: economists, statisticians, employees of management bodies and financial and economic services, enterprises and organizations, researchers, entrepreneurs, mass media.

In accordance with paragraph 2 of paragraph 10 of the Rules for the Revision of Published Official Statistical Information for statistical Purposes and on the basis of updated administrative data on household accounting, a special revision of certain indicators of crop production and livestock statistics for 2022 and 2023 was carried out in relation to peasant and farm farms and households of the population.

## Content

1. Main indicators of agriculture .....	6
2. Profitability of agricultural production in agricultural enterprises .....	22
3. Crop production .....	30
4. Livestock .....	101
5. Resources and use of main agricultural products .....	140
6. Hunting and farm .....	143
7. Forestry.....	144
8. Fisheries .....	147
Brief methodological notes .....	150

# 1. Main indicators of agriculture

## 1.1 Specified acreage of crops

thousand hectares

	Total*	From it								
		from it cereals (including rice) and legumes	oil seed crops	cotton	sugar beet	tobacco	potatoes*	open ground vegetables*	melon cultures	feed crops

### Fish catch by species in the Republic of Kazakhstan in 2023

in percent

## Brief methodological notes

Agricultural enterprise - a legal entity or its structural unit engaged in the production, storage and processing of agricultural products the provision of services in the s of Agriculture.

Individual entrepreneurs and a peasant or farm enterprise - a labor association of persons in which the implementation of individual entrepreneurship is inextricably linked with the use of agricultural lands for the production of agricultural products. as well as with the processing and marketing of these products.

For small individual entrepreneurs and peasant or farm enterprises - on the basis of calculations, which are based on: data from entries in the accounting books of peasant or farm enterprises, sample surveys on the production of livestock products.

The households of households include personal auxiliary households. collective gardens and vegetable gardens, summer cottages.

For households - on the basis of calculations, which are based on: data from records in household books, sample surveys of households on the production of livestock products.

Gross output of products (services) of agriculture. forestry and fisheries - the total cost of products and services created in the sectors of the agricultural secto, both for sale and for own consumption, It is formed from the gross output of products (services) of agriculture the cost of products (services) produced in hunting, forestry and logging, fisheries and aquaculture.

Gross output of products (services). agriculture - the total value of goods and services produced in the crop and livestock production, taking into account changes in the value of work in progress from the beginning to the end of the year.

Gross crop production - the cost of all crops obtained from the current crop (grains, legumes and oilseeds, roots and tubers, tobacco, vegetables and melons, fruits and berries, forage crops, flowers and other plant products), taking into account the changes the value of work in progress in crop production from the beginning to the end of the year.

Gross livestock production - the cost of all products obtained from farm animals (milk, eggs, wool, hides and others), the cost of livestock and poultries slaughtered in farms or sold for slaughter, the cost of beekeeping and fur farming.

The index of physical volume - a relative measure of the change in the volume of production in the industry in the comparable periods.

Sown area - arable land planted with crops, It consists of: winter crops of the past year minus the winter death; spring crops sown in the current year on an independent area, including re-sowing of winter crops and perennial grasses sowing of the given year (blanket); perennial grasses of past years sowing on the square that will be harvested this year, i.e. cutting area, preserved by spring. The indicator "Specified cultivated area" is formed by agricultural enterprises on the basis of statistical observation data on form 29-cx "On the Harvest of Agricultural Crops", on peasant or farm farms and households - on the basis of household accounting data and accounting of peasant or farm enterprises on 1 July of the reporting year.

Harvested area - the actual area from which the crop was harvested.

Gross harvest of agricultural crops - products produced (collected) from the entire area of crops of various crops, agricultural plantations or other agricultural land.

Yields of agricultural crops - an indicator characterizing the average harvest of agricultural products from the Unity area; calculated as the ratio of the gross collection to the harvested area, in centners from 1 hectare.

Number of livestock and poultries - the number of livestock and poultries available on farms on a specific date.

Received offspring - the number of births of animals received from the queens belonging to the farm, without taking into account the stillborn offspring.

Livestock and poultries fell and died - the number of farm animals and poultries that died and were slaughtered as a result of illness, natural disaster, employee neglect, etc.

Production of livestock products - production of finished products and raw materials as a result of the use of farm animals (milk, eggs, wool, hides, etc.), slaughtering or selling for all types of livestock and poultries, bee products and fur farming.

Slaughtered on the farm or sold for slaughter and poultries - slaughter and poultries directly on the farm or at the slaughterhouse for using meat for own needs, for selling or issuing to organizations, enterprises and workers of the farm, including barter deals, and selling livestock and poultries for slaughter to procurement organizations, processing enterprises, through a network of catering (canteens, restaurants, cafes), trading network, including markets, as well as on the export.

Milk production is characterized by actually fed cow, sheep, goat, camel. mare milk, regardless of

whether it was sold or a part of it consumed in the household for feeding calves and pigs, milk, sucked by Calves with sucky content, is not included in the production and is not taken into account when calculating the productivity of cows.

Wool production includes all the actual sheared sheep, goat, camel, wool and goat fluff, regardless of whether it was sold or used for on-farm needs. Wool, obtained from sheepskins in the industrial processing of them on the skin (the so-called "sour Wool") is not included in the products. The weight of wool is shown physical, immediately after sheep shearing.

Production of eggs includes the collection of eggs for the year from all types of domestic poultries, including eggs, used on production of poultries (incubation and others).

Livestock productivity and poultries is an indicator characterizing Production of livestock products per 1 head of livestock and poultries. Productivity is characterized by such indicators as the average milk yield per 1 dairy cow, the average egg production per 1 laying hen, the average cut wool from 1 sheep, the average live or carcass weight of 1 heads of livestock.

The level of profitability (loss) of agricultural production - the degree of efficiency of use of material, labor and financial resources, as well as the natural resources in the production of agricultural products, It is defined as the ratio of gross profit to the cost of sold agricultural products.

Volume of products (services) in hunting– the cost of wild animals and game hunted as a result of hunting costs, such as the protection of wild animals, their numbers and settlement, hunting and hunting surveys, the cost of services rendered in s hunting and breeding wild animals and game.

The number of hoofed animals, fur-bearing animals recorded in the farms is the total number of (by headings) wild animals in the assigned hunting grounds on the basis of the accounting conducted in the reporting year.

Hoofed animals, fur-bearing animals and game birds were harvested - the number of wild animals, birds and marine mammals actually removed from the hunting grounds on the basis of the hunting registration list, licenses (permits), shooting cards, vouchers, as well as captured and sold to other organizations (for resettlement in zoos for scientific purposes).

Volume of products (services) in forestry– the cost of wood harvested during the main felling and forest care, the felling associated with the reconstruction of forest plantations and selective sanitary felling, the cost of growing the forest, reforestation and forest management, the cost of services rendered related to forestry and logging.

Untreated wood harvesting - Production of wood materials that are mined by distributing to parts of felled trees and wood decks for further use and processing.

Harvesting forest tree seeds - collecting seed of forest plantations in order to ensure the further reproduction of forests.

Forest management - a system of measures, including the definition of boundaries, the division of forests into sections and areas of forest plantations, groups, categories of protection (water protection, protection, sanitary and hygienic and recreational, etc.); forest inventory (forest area and wood supply); determination of the size of the annual forest use (calculated cutting area), reforestation and others.

Volume of products (services) in fisheries and aquaculture– the cost of caught fish, harvested seafood and marine materials (crustaceans, mollusks, turtles, ascidians, sea urchins, natural pearls, sponges, corals, algae), the cost of breeding marine organisms and cultures, as well as the cost of services rendered related to fishing and fish farming.

Catch of fish and other aquatic animals - the entire amount of fish and other seafood that were harvested for sale and use for the company's own needs.
