[GDP deflator by use components](#)

Gross domestic product (GDP) - one of the most important indicators of the system of national accounts, characterizing the final result of the country's economic activity.

Contribution - the value of the influence of the percentage change in the indicator on the total value of GDP.

Final consumption - the consumption of goods and services fully used by individual households or society as a whole to satisfy their individual or collective needs and requirements.

Gross capital formation - the total value of gross fixed capital formation, changes in inventories and acquisitions of valuables less their disposal.

4. Methodological notes

Gross domestic product calculated using the final use method is the sum of all economic sectors' expenditures on final consumption, gross capital formation and net exports.
