1. Key points

In January- October 2024 the industrial production index (hereinafter the IIP) in Kazakhstan amounted to 102.6%.

Production growth is observed in the mining industry and quarrying by 0.3%, manufacturing industry – by 4.8%, supply of electricity, gas, steam, hot water and air conditioning – by 4.9%.

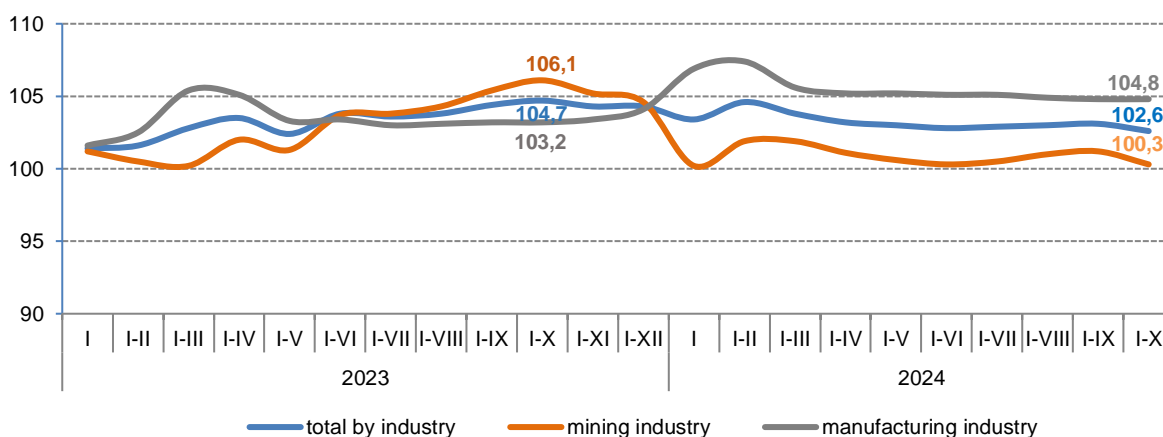

Among the regions, the largest growth was recorded in Ulytau, Karagandy, Turkistan regions.

2. Main indicators of industry performance

In January- October 2024, industrial products were produced in the amount of 40391.6 billion tenge, of which in the mining industry - by 18448.2 billion tenge (45.7% of the total volume), in the manufacturing industry - by 19192.6 billion tenge (47.5%).

Industrial production indices

as a percent of the corresponding period of the previous year

Indices of industrial production by types of activity

in percent

	January- September 2024 by January- September 2023	October 2024 to		January- October 2024 by January- October 2023
		September 2024	October 2023	
Industry	103.1	97.5	98.0	102.6
Mining and quarrying	101.2	92.8	91.6	100.3
Manufacturing industry	104.8	99.8	104.8	104.8
Supply of electricity, gas, steam, hot water and air conditioning	105.5	126.2	99.6	104.9
Water supply; collection, treatment and disposal of waste, activities for the elimination of pollution	98.4	92.1	101.7	98.8

In the mining industry and quarrying in January- October 2024 the IIP was 100.3%, due to an increase in the production of coal (100.5%) and other metal ores (108.4%).

In the manufacturing industry the IIP in the reporting period of 2024 compared to the corresponding period of 2023 104.8%. The growth was recorded in the production of chemical industry products – by 8.9%, manufacture of basic

pharmaceutical products and pharmaceuticals - by 23.8%, metallurgical - by 7.5%, finished metal products, except machinery and equipment – by 29.3%, mechanical engineering - by 4.8%, other finished products – by 38.9%.

In the supply of electricity, gas, steam, hot water and air conditioning the IIP amounted to 104.9% due to an increase in the production, transmission and distribution of electricity - by 5.2%, production and distribution of gas fuel – by 4.1%.

In water supply; sanitation; waste collection, treatment and disposal, pollution elimination activities the IIP in January-October 2024 amounted to 98.8%. The volumes of water intake, treatment and distribution of decreased by 2.4%, collection, processing and disposal of waste, recycling (recovery) of materials by 2.4%.

An increase in production volumes was recorded in 17 regions of the republic, a decrease is observed in Atyrau, Kostanay regions and Almaty city.

3. Glossary

The volume of industrial production in value terms is the cost of all finished products (products) produced by the enterprise. semi-finished products of its production (both from its own raw materials and materials. and from raw materials and materials of the customer). intended for sale to the side. its capital construction and its non-industrial divisions. issuing to its employees on account of wages. as well as works and services of an industrial nature. performed on orders.

The volume of industrial production in physical terms is the output of specific types of products in physical terms. The volume of industrial production in physical terms is taken into account in terms of gross output. including products spent on industrial and production needs within a given enterprise and produced from raw materials supplied by the customer.

The index of industrial production is a relative indicator that characterizes the change in the volume of industrial production in the periods being compared.

4. Methodological notes

The information base for the formation of indicators of industrial products (goods, services) is the primary data of nationwide statistical observations of industrial enterprises, enterprises with a secondary activity of "Industry", individual entrepreneurs, peasant or farm enterprises.

To calculate the index of industrial production, a method is used based on the dynamics of physical indicators for an established set (basket) of representative goods, followed by a step-by-step aggregation of individual (commodity) indices into indices by types of economic activity. Indices for large populations are calculated as a weighted average of the constituent elements of these populations.
