4. Glossary

Wages are an important form of income for a significant part of the economically active population, namely, employees. According to the Labor Code of the Republic of Kazakhstan, wages are remuneration for work depending on the qualifications of the employee, complexity, quantity, quality and conditions of the work performed, as well as compensation and incentive payments.

According to the ILO standards, there are four main groups of remuneration:

- 1) wages accrued according to tariff rates and official salaries;
- 2) lump-sum payments and bonuses;
- 3) compensation payments related to working hours and working conditions;
- 4) payment for unworked time.

The average monthly nominal salary is determined by dividing the amount of the accrued salary fund by the actual number of employees and by the number of months in the reporting period.

The nominal wage index is a relative indicator that characterizes the change in wages in the reporting period compared to the base period.

The real wage index is a relative indicator that characterizes the change in nominal wages in the reporting period compared to the base period, taking into account price changes. The real wage index is determined by dividing the nominal wage index by the consumer price index for goods and services. Both indexes belong to the same time period.

Median salary is the amount of wages that is in the center of the distribution of the number of employees by the size of the accrued salary and divides it into two equal parts – with wages below and above the median.

5. Methodological explanations

The objects of state statistical observations on wage statistics are all legal entities and their structural and separate subdivisions of all types of economic activity, with a population of over 100 people, as well as with a population of up to 100 people, except those reporting on the statistical form "On the activities of a small enterprise" (index 2-MP), regardless of their affiliation and forms of ownership.

State statistical observations of the average monthly salary, the composition of the wage fund, and the employer's labor costs are conducted using a continuous method.

The source of data on the average monthly salary is the national statistical observation "Labor Report" (index 1-T, quarterly, annual frequency). According to this statistical observation, all large, medium and small enterprises (excluding small enterprises engaged in entrepreneurial activity) are subject to examination.
