3. Glossary

Transported cargo – the amount of cargo in tons transported by transport.

Cargo turnover of transport– the volume of work of transport for the transportation of goods, expressed in ton-kilometers. It is defined as the sum of the products of the weight of each batch (shipment) of the transported cargo over the distance of its transportation.

Transported passengers – the number of passengers transported over a certain period of time. The unit of observation in passenger transportation statistics is a passenger-trip.

Passenger turnover of transport– the volume of work of transport for the transportation of passengers. The unit of measurement is the passenger-kilometer. i.e. the movement of 1 passenger over a distance of 1 kilometer. It is determined by summing the products of the number of passengers of each carriage by the distance of carriage in kilometers.

The physical volume index- is a relative indicator that characterizes the change in the quantitative volumes of freight and passenger traffic in the reporting period compared to the base period and is calculated on the basis of the weighted average growth rate of revenue from the transportation of goods and passengers.

4. Methodological explanations

The release provides statistical data on the work of enterprises with the main type of activity - transport (OKED code 49-51), reporting on the monthly form 1-transport.enterprises of other sectors of the economy engaged in the transportation of passengers and cargo on a commercial basis.as well as individual entrepreneurs engaged in the transportation of goods and passengers by road on a commercial basis.reporting according to quarterly forms: 1-sole proprietor (auto cargo).1-sole proprietor (auto passengers).
