1. Key points

Domestic tourism consumption in 2023 increased in nominal terms by 32.2% and amounted to 2759.6 billion tenge (in 2022 2087.6 billion tenge), of which business travel accounted for 529.9 billion tenge. Domestic tourism spending increased 1595.2 billion tenge in 2022 to 2233.7 billion tenge in 2023. Of these, expenses related to inbound tourism for 2023 amounted to 1172.3 billion tenge, expenses related to domestic tourism – 1061.4 billion tenge (in 2022, 804.4 billion tenge and 790.8 billion tenge respectively).

Expenditures relating to domestic tourism

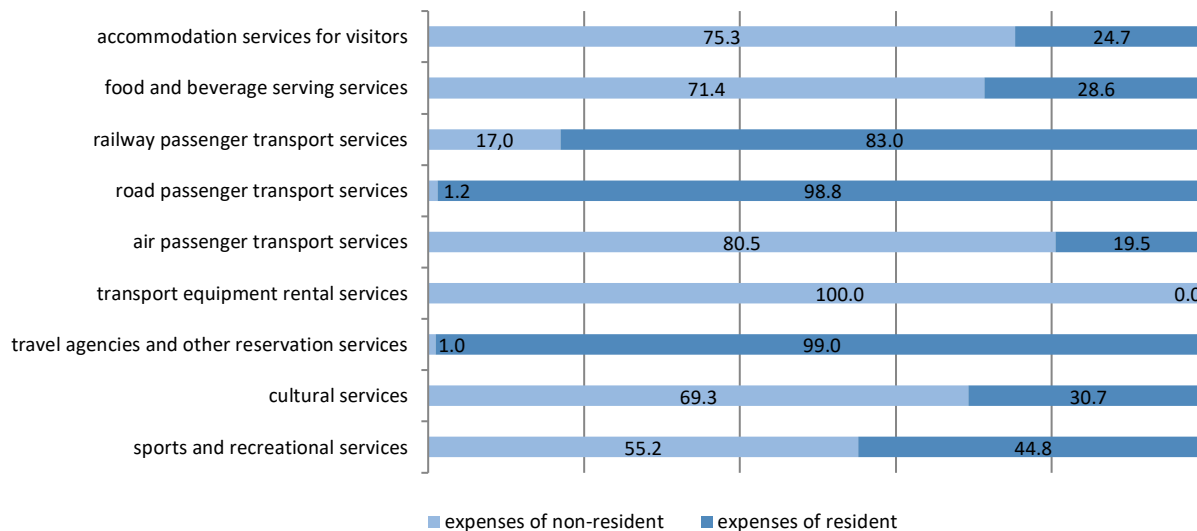

million tenge

The structure of tourism consumption within the country by category of visitors in 2023 is dominated by the expenses of non-resident visitors, whose share was 52.5% (the share of expenses of resident visitors was 47.5%, respectively). In 2022, the share of expenses of non-resident visitors in the structure of tourist consumption within the country was 50.4%, of resident visitors – 49.6%.

The structure of consumption of tourism products by categories of visitors in 2023

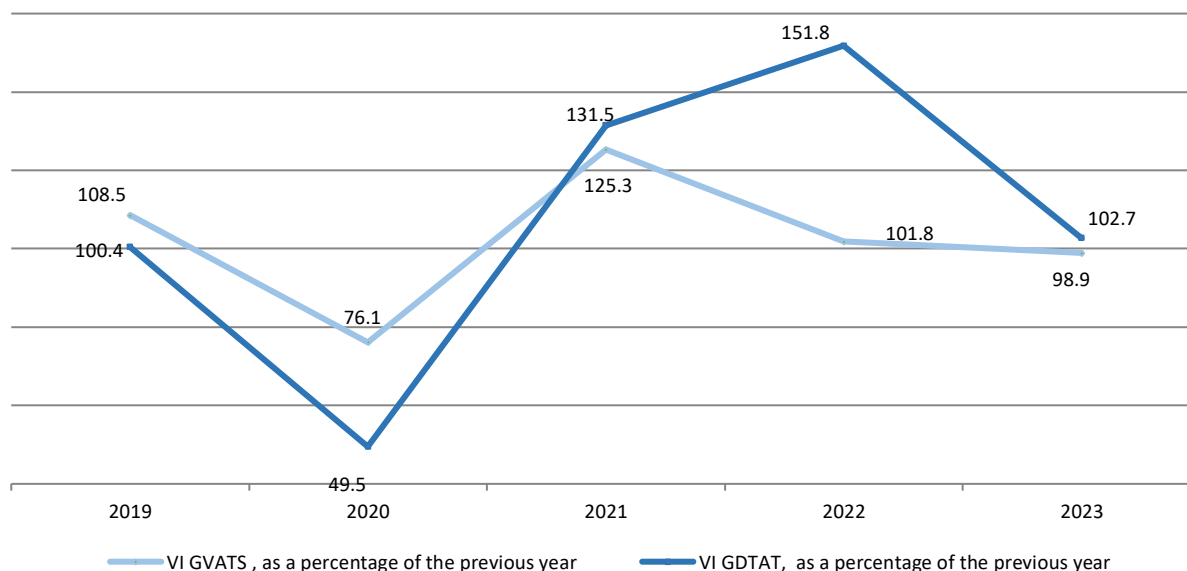

as a percentage of the total

Gross Value Added created in the tourism industries (GVATS) for 2023 amounted to 3283.2 billion tenge, the volume index (hereinafter - VI) GVATS compared to the previous year amounted to 98.9% (labor productivity index in the tourism industries, in % to the previous year amounted to 97%).

Tourism Direct Gross Value Added (GDTAT) for 2023 amounted to 1184.4 billion tenge, the VI GDTAT was at the level of 102.7%.

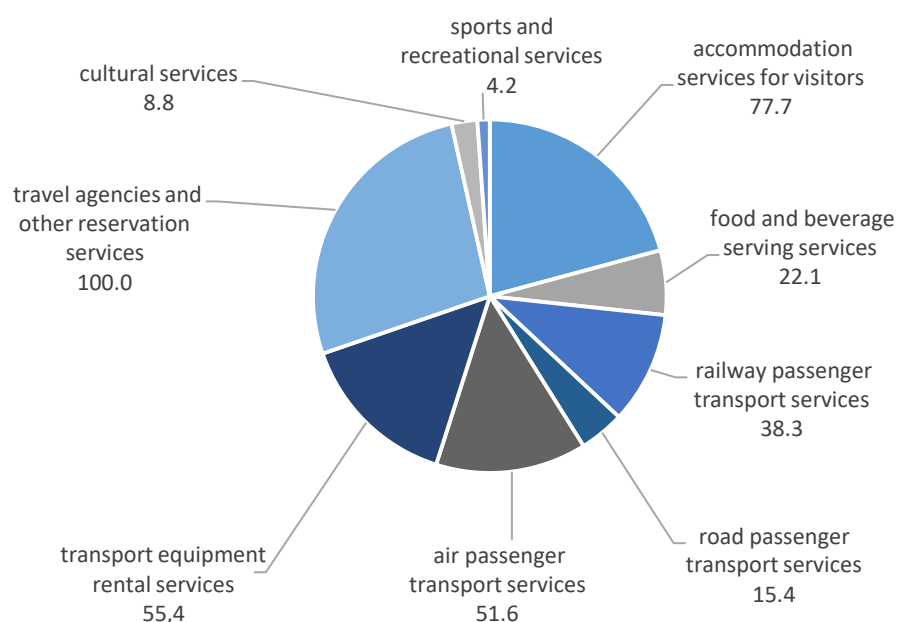

Dynamics of VI GVATS and GDTAT

The share of tourism (by value) in the output (supply) of goods and services of domestic producers decreased from 1704.7 billion tenge in 2022 to 1955.8 billion tenge in 2023.

The share of tourism in the supply of goods and services in 2023

in percentages

2. Glossary

Gross value added - the value of the final product minus the value of intermediate consumption;

Gross Value Added created in the tourism industries (GVATS) - the sum of the gross value added created by all establishments operating in the tourism sector, regardless of whether all their products are intended for visitors and regardless of the degree of specialization of their production process;

Tourism Direct Gross Value Added (GDTAT) - part of the gross value added generated by tourism industries and other sectors of the economy directly related to visitor services in accordance with the dynamics of consumption related to tourism within the country;

Inbound tourism - travel within the Republic of Kazakhstan of persons who do not permanently reside on its territory;

Outbound tourism - travel of citizens of the Republic of Kazakhstan and persons permanently residing in the Republic of Kazakhstan to another country;

Domestic tourism - travel within the Republic of Kazakhstan of citizens of the Republic of Kazakhstan and persons permanently residing on its territory;

Tourism industry - a set of establishments whose main activity is the implementation of activities typical of tourism

Domestic tourism consumption - the consumption of a particular resident visitor within the economy in question;

Tourism share - the share of domestic tourism consumption within each individual supply element;

Inbound tourism consumption - the tourism consumption of a non-resident visitor within the economy in question;

Outbound tourism consumption - the tourism consumption of a resident visitor outside the economy in question;

Tourism - a journey of individuals lasting from twenty-four hours to one year or less than twenty-four hours, but with an overnight stay for purposes not related to paid activities in the country (place) of temporary residence;

Tourist - an individual visiting the country (place) of temporary residence for a period of twenty-four hours to one year and spending at least one night in it (in it) for recreational, educational, professional, business, sports, religious and other purposes without occupation paid activity;

Excursionist - an individual visiting tourist resources for educational purposes in the country (place) of temporary stay for no more than twenty-four hours

Tourist product - a set of tourist services sufficient to meet the needs of a tourist during a trip.

3. Methodological notes

The Tourism Satellite Account (hereinafter referred to as TSA) is a system of statistical indicators in the form of ten tables, compiled on an annual basis.

When forming the TSA, classifications of tourist products and the tourism industry are used to harmonize the indicators of the tables.

The classification of tourism products includes consumer goods typical of tourism and other products related to tourism.

Tables 1, 2, 3 describe tourism consumption in value terms by type of tourism, by tourism product and by category of visitor. Table 1 deals with inbound tourism, table 2 with domestic tourism and table 3 with outbound tourism. The amount and structure of tourism expenses are determined separately for tourists and sightseers.

Table 4 estimates the main aggregate as domestic tourism consumption by summing inbound tourism expenditure (table 1) and domestic tourism expenditure (table 2) and all additional components, including expenditure by resident visitors making business trips.

Table 5 presents the production account in the tourism industries and other sectors of the economy of the Republic of Kazakhstan. The output of tourism industries is broken down by type of product and is valued at basic prices. Intermediate consumption is valued at purchasers' prices. The difference between the two values is called gross value added (hereinafter - GVA) in basic prices and is relevant to each tourism industry as a whole.

Table 6 compares domestic tourism consumption from table 4 with domestic supply at purchasers' prices. The total domestic supply is obtained by summing the domestic output of the tourism industries from table 5 and additional indicators: imports, net taxes minus subsidies on products produced and imported, trade and transport margins.

Table 7 reflects the quantitative assessment of employment in the tourism industries: the number of employed people, the number of hours worked, the number of employed people in the equivalent of full employment. Employment data are compiled on the basis of statistical forms of nationwide statistical observation, disaggregated by sex and employment status by type of economic activity.

Table 8 defines gross fixed capital formation (hereinafter referred to as GFCF) in the tourism industries and in other sectors of the economy. The source of data for estimating GFCF is statistical forms of national statistical observations on acquisitions (retirements) of fixed assets and investments in fixed assets.

Table 9 characterizes the collective consumption of tourism and reflects the cost of non-market services that are provided by governments at different levels for joint consumption by visitors. Table 9 uses data from administrative sources on tourism collective consumption expenditures by type of service and level of government.

Table 10 presents non-monetary indicators of the number of trips by type of tourism, categories of visitors and length of stay, and modes of transport used by non-resident visitors to enter the country. The sources of information are the results of national statistical surveys and the statistical business register.
