1. Key points

In January- April 2025 the industrial production index (hereinafter the IIP) in Kazakhstan amounted to 106.6%.

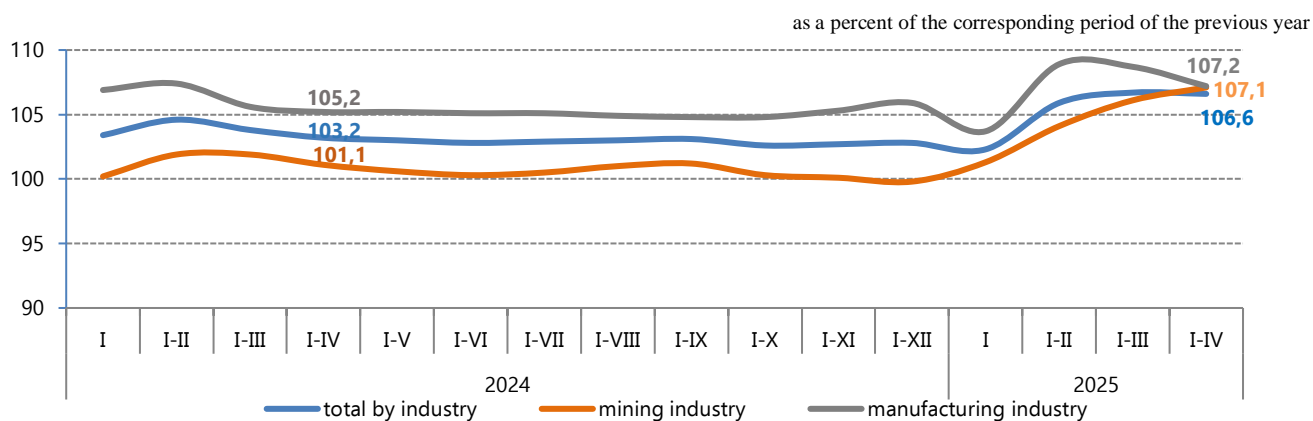

Production growth is observed in the mining industry and quarrying by 7.1%, manufacturing industry – by 7.2%.

Among the regions, the largest growth was recorded in Almaty, Atyrau, Zhambyl, Zhetisy, Karagandy, Turkistan regions, Almaty and Shymkent cities.

2. Main indicators of industry performance

In January- April 2025, industrial products were produced in the amount of 18989 billion tenge, of which in the mining industry - by 8711.7 billion tenge (45.9% of the total volume), in the manufacturing industry - by 8802.8 billion tenge (46.3%).

Industrial production indices

Indices of industrial production by types of activity

in percent

	January- March 2025 by January- March 2024	April 2025 to		January- April 2025 by January- April 2024
		March 2025	April 2024	
Industry	106.7	97.3	106.2	106.6
Mining and quarrying	106.1	96.0	110.1	107.1
Manufacturing industry	108.7	100.2	102.9	107.2
Supply of electricity, gas, steam, hot water and air conditioning	97.2	83.6	102.4	98.5
Water supply; collection, treatment and disposal of waste, activities for the elimination of pollution	93.9	98.7	93.7	93.8

In the mining industry and quarrying in January- April 2025 the IIP was 107.1%, due to an increase in the production of coal (111.2%), crude oil (108.8%), other metal ores (101.4%), extraction of other minerals (120.3%).

In the manufacturing industry the IIP in the reporting period of 2025 compared to the corresponding period of 2024 107.2%. The growth was recorded in the production of manufacture of food - by 12%, beverages – by 6.1%, tobacco products - by 26.3%, of coke and petroleum refining goods - by 13.7%, chemical industry products – by 11.2%, of rubber and plastic – 8.1%, products manufacture of other nonmetallic mineral products - by 12.9%, ferrous metallurgy, except for metal casting – 5.1%, finished metal products, except machinery and equipment – by 21.6%, mechanical engineering - by 11.2%.

In the supply of electricity, gas, steam, hot water and air conditioning the IIP amounted to 98.5% due to decrease in the production, transmission and distribution of electricity - by 1.5%. production and distribution of gas fuel – by 7.6%.

In water supply; sanitation; waste collection, treatment and disposal, pollution elimination activities the IIP in January-April 2025 amounted to 93.8%. The volumes of water intake, treatment and distribution of decreased by 11.1%, collection, processing and disposal of waste, recycling (recovery) of materials by 3%.

An increase in production volumes was recorded in 17 regions of the republic, a decrease is observed in Ulytau, Kostanay and Shygys Kazakhstan regions.

Industrial production index

as a percent of the corresponding period of the previous year. increase +. decrease -

3. Glossary

The volume of industrial production in value terms is the cost of all finished products (products) produced by the enterprise, semi-finished products of its production (both from its own raw materials and materials, and from raw materials and materials of the customer), intended for sale to the side, its capital construction and its non-industrial divisions, issuing to its employees on account of wages, as well as works and services of an industrial nature, performed on orders.

The volume of industrial production in physical terms is the output of specific types of products in physical terms. The volume of industrial production in physical terms is taken into account in terms of gross output, including products spent on industrial and production needs within a given enterprise and produced from raw materials supplied by the customer.

The index of industrial production is a relative indicator that characterizes the change in the volume of industrial production in the periods being compared.

4. Methodological notes

The information base for the formation of indicators of industrial products (goods, services) is the primary data of nationwide statistical observations of industrial enterprises, enterprises with a secondary activity of "Industry", individual entrepreneurs, peasant or farm enterprises.

To calculate the index of industrial production, a method is used based on the dynamics of physical indicators for an established set (basket) of representative goods, followed by a step-by-step aggregation of individual (commodity) indices into

indices by types of economic activity, Indices for large populations are calculated as a weighted average of the constituent elements of these populations.
