1. Key points

The Gross Domestic Product by final expenditure method in 2024 amounted to 133157833,5 million tenge.

GDP increased by 5% in real terms compared to the corresponding period last year.

GDP by production method in 2024 amounted to 136693318,3 million tenge.

The statistical discrepancy between GDP methods of production and the expenditure was 3535484,8 million tenge or 2,6% of GDP.

2. GDP by use components

GDP by final use method for 2024

	At current prices, million tenge	To the previous year, in percent		In percentages to the end
		IPV	deflator	
Final consumption expenditure	88 245 450,3	107,9	108,8	66,3
households	73 171 015,4	109,6	108,8	55,0
general government bodies	14 749 597,0	101,0	108,7	11,1
for individual goods and services	7 887 979,5	101,6	111,1	5,9
for collective services	6 861 617,5	100,3	106,1	5,2
non-profit organizations serving households	324 837,9	81,8	106,6	0,2
Grosscapitalformation	37 457 431,1	105,4	105,7	28,1
gross fixed capital formation	33 469 209,9	106,5	105,5	25,1
change in inventories	3 918 307,7	-	106,1	2,9
net acquisition of valuables	69 913,5	-	-	0,1
Net export	7 454 952,1	-	-	5,6
export of goods and services	42 644 271,2	100,0	102,6	32,0
import of goods and services	35 189 319,1	105,8	100,2	26,4
Gross domestic product by final expenditure method	133 157 833,5	105,0	108,3	100,0
Gross domestic product by production method	136 693 318,3	105,0	109,0	-
Statistical discrepancy*	3 535 484,8	-	0,7	-

*Statistical discrepancy is the difference between gross domestic product calculated by the production method and the expenditure method.

In the structure of GDP by use components for 2024 and the share of expenditures on final consumption amounted to 66,3%, gross capital formation – 28,1%, net exports – 5,6%.

GDP structure by use components

in percentages

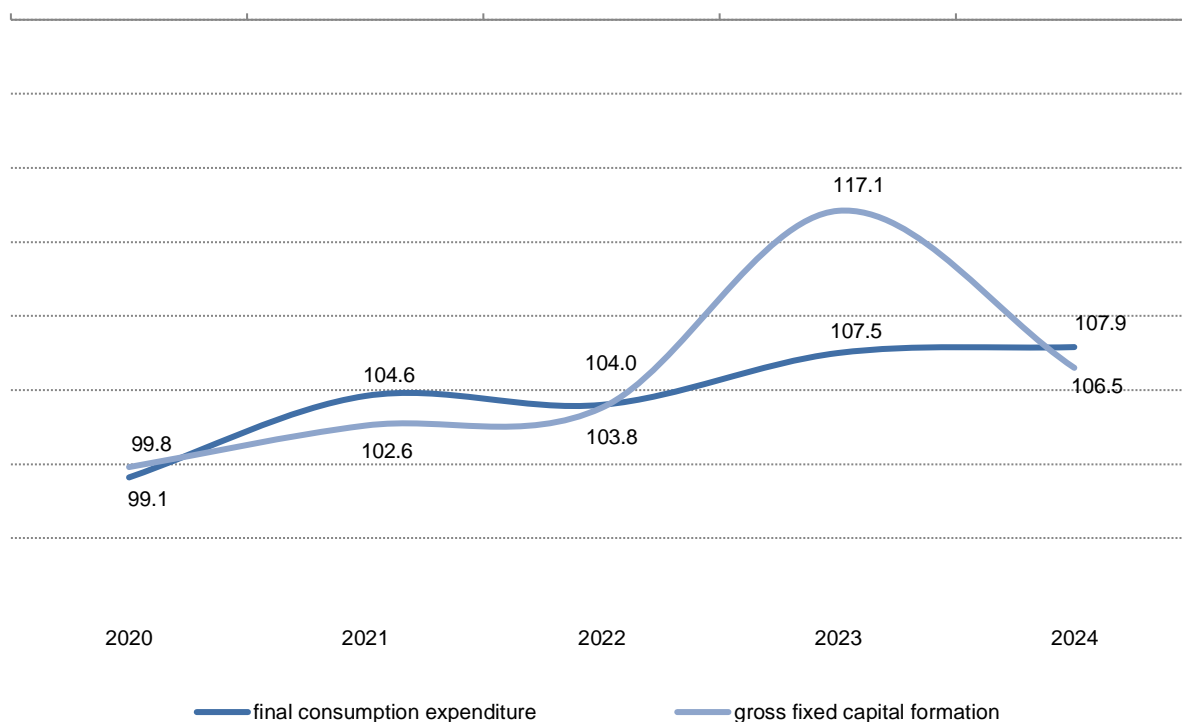

Compared to the corresponding period last year, in real terms there is an increase in the final consumption expenditure component by 7,9% due to an increase in household final consumption expenditure by 9,6% and general government bodies by 1%.

Gross fixed capital formation in real terms amounted to 6,5% compared to the corresponding period last year.

IPV GDP components by expenditure method

as a percentage of the previous year

3. Glossary

Gross domestic product (GDP) - one of the most important indicators of the system of national accounts, characterizing the final result of the country's economic activity.

Contribution - the value of the influence of the percentage change in the indicator on the total value of GDP.

Final consumption - the consumption of goods and services fully used by individual households or society as a whole to satisfy their individual or collective needs and requirements.

Gross capital formation - the total value of gross fixed capital formation, changes in inventories and acquisitions of valuables less their disposal.

4. Methodological notes

Gross domestic product calculated using the final use method is the sum of all economic sectors' expenditures on final consumption, gross capital formation and net exports.
