## 4. Glossary

The labor force is the employed and unemployed population.

Employed person - a natural person who carries out activities for payment or by deriving income through the use of property, the production and sale of goods, the performance of work, the provision of services.

Employed persons include:

- 1) employees, as well as persons having other paid work (elected, appointed or approved);
- 2) individual entrepreneurs;
- 3) persons engaged in private practice;
- 4) individuals carrying out activities under a civil law contract that are not employees;
- 5) individuals who are founders (participants) of business partnerships and founders, shareholders (participants) of joint-stock companies, as well as members of production cooperatives;
- 6) independent workers;
- 7) serving in the Armed Forces, other troops and military formations, law enforcement and special state bodies of the Republic of Kazakhstan.

An unemployed person is a natural person who is looking for a job and is ready to start work.

The unemployment rate is the share of the unemployed in the labor force, measured as a percentage.

The youth unemployment rate at the age of 15-34 is the share of the unemployed population aged 15-34 in the labor force at the same age, measured as a percentage.

The long-term unemployment rate is the proportion of the unemployed population who have been unemployed for 1 year or more in the labor force, measured as a percentage.

Persons outside the labor force - persons who are not employed or unemployed.

## 5 . Methodological explanations

In the Republic of Kazakhstan, since 2001, sample surveys of employment of the population have been conducted. The survey covers all regions of the republic on the basis of a selective method of observation with subsequent distribution of the results to the entire population. The units of observation are households and persons aged 15 and over.

The presented indicators are based on the results of a sample survey on an extended network of households (3,4% of the total number of households), the sample is formed once a year. Lists of households are formed on the basis of the Register of Housing Stock of the Republic of Kazakhstan. The sampling methodology was developed jointly with experts from the German Statistical Office DESTATIS as part of the KAZSTAT Project to Strengthen the National Statistical System of Kazakhstan.

The results of the survey were disseminated taking into account the current demographic statistics.

The survey of the population is carried out using the Questionnaire for a sample survey of employment of the population, which contains questions that characterize each member of the household. The questionnaire is structured according to the principle of a logical sequence of questions, on the basis of which the population is classified into employed or unemployed and persons not included in the labor force.

Concepts and definitions are given in accordance with the Law of the Social Code of the Republic of Kazakhstan dated April 20, 2023, as well as in accordance with the standards and methodological approaches of the International Labor Organization (ILO).
