GDP by final expenditure method

Date of publication: 13.07.2026
Date of next publication: 12.10.2026

1. Key points

The Gross Domestic Product by final expenditure method for January-March 2026 amounted to 33207500,2 million tenge.
GDP increased by 3% in real terms compared to the corresponding period last year.
GDP by production method for January-March 2026 amounted to 34102358,1 million tenge.
The statistical discrepancy between GDP methods of production and the expenditure was 894857,9 million tenge or 2,6% of GDP.

2. GDP by use components

GDP by final use method for January-March 2026

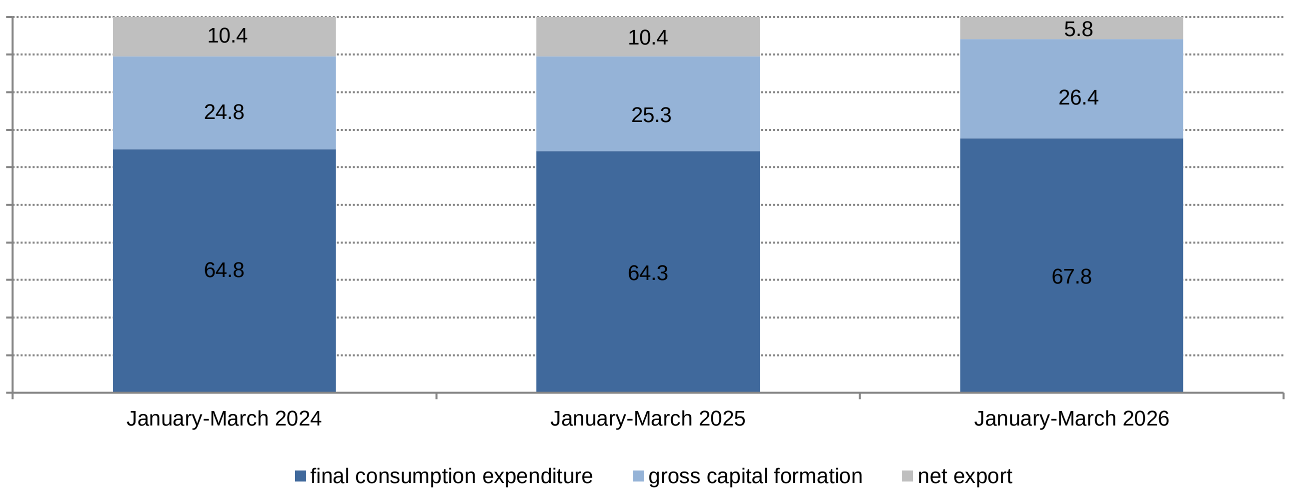
	At current prices, million tenge	To the previous year, in percent		In percentages to the end
		IPV	deflator	
Final consumption expenditure	22 528 738,1	106,7	110,7	67,8
households	18 488 925,3	105,7	111,7	55,7
general government bodies	3 870 848,9	112,8	106,8	11,6
for individual goods and services	2 195 107,0	105,9	110,5	6,6
for collective services	1 675 741,9	122,6	102,4	5,0
non-profit organizations serving households	168 963,9	88,5	93,9	0,5
Gross capital formation	8 749 461,2	107,2	108,7	26,4
gross fixed capital formation	7 462 432,8	107,9	109,5	22,5
change in inventories	1 287 028,4	-	104,1	3,9
Net export	1 929 300,9	-	-	5,8
export of goods and services	11 146 094,7	94,1	103,5	33,6
import of goods and services	9 216 793,8	103,1	106,9	27,8
Gross domestic product by end use method	33 207 500,2	103,0	108,7	100,0
Gross domestic product by production method	34 102 358,1	103,0	108,7	-
Statistical discrepancy*	894 857,9	-	-	-

**Statistical discrepancy is the difference between gross domestic product calculated by the production method and the expenditure method.*

In the structure of GDP by use components for January-March 2026 and the share of expenditures on final consumption amounted to 67,8%, gross capital formation – 26,4%, net exports – 5,8%.

GDP structure by use components

in percentages



Compared to the corresponding period last year, in real terms there is an increase in the final consumption expenditure component by 6,7% due to an increase in household final consumption expenditure by 5,7%, general government bodies by 12,8%.

Gross fixed capital formation in real terms amounted to 7,9% compared to the corresponding period last year.

3. Glossary

Gross domestic product (GDP) - one of the most important indicators of the system of national accounts, characterizing the final result of the country's economic activity.

Contribution - the value of the influence of the percentage change in the indicator on the total value of GDP.

Final consumption - the consumption of goods and services fully used by individual households or society as a whole to satisfy their individual or collective needs and requirements.

Gross capital formation - the total value of gross fixed capital formation, changes in inventories and acquisitions of valuables less their disposal.

4. Methodological notes

Gross domestic product calculated using the final use method is the sum of all economic sectors' expenditures on final consumption, gross capital formation and net exports.
