1. Key indicators

813,3 billion tenge total expenditures on environmental protection in 2025	94,5% industry's share of total environmental protection expenditures	46,3% share of investment in environmental protection
--	---	---

2. Main Results

The Environmental Protection Expenditures Account is a statistical tool that makes it possible to estimate the volume and structure of expenditures aimed at environmental protection, as well as to consider their distribution by type of economic activity. These accounts provide an opportunity to see which industries account for the bulk of environmental costs and which areas account for the largest part of the costs.

In 2025, total expenditures on environmental protection in the Republic of Kazakhstan amounted to 813,3 billion tenge, including current expenditures of 436,7 billion tenge and investments of 376,6 billion tenge.

Dynamics of total expenditures on environmental protection

In the structure of total expenditures by type of economic activity, the largest share is accounted for by industry, 94.5% (768.9 billion tenge). Including: supply of electricity, gas, steam, hot water and conditioned air – 280.7 billion tenge, manufacturing industry – 269.1 billion tenge, mining and quarrying – 178.5 billion tenge.

Environmental protection expenditures by type of economic activity in 2025

thousand tenge

Economy activities	Total environmental expenditures	Including:	
		current environmental expenditures	investment environmental expenditures
Agriculture, forestry and fisheries	2 813 545	1 047 465	1 766 080
Industry	768 948 413	408 999 386	359 949 027

3. Glossary

Environmental protection costs are expenses aimed at carrying out activities to prevent, reduce, and eliminate the negative impact of economic activity on the environment.

Current environmental protection costs are expenses incurred by enterprises and organizations for carrying out measures, ensuring the ongoing operation of technological processes and production facilities, as well as for the maintenance and operation of machines and equipment that have been designed and are functioning to prevent, reduce, treat (process), and/or eliminate pollutants (substances).

Investments in environmental protection are capital expenditures aimed at creating, acquiring, modernizing, and reconstructing fixed assets intended for environmental protection purposes.

Types of environmental protection activities are areas of activity related to the protection of atmospheric air, wastewater treatment, waste management, soil and water protection, biodiversity conservation, radiation safety, scientific research, and other areas of environmental protection.

4. Methodological Notes

The account of environmental protection costs reflects the expenses of economic entities for carrying out environmental protection activities during the reporting period.

Environmental protection costs are presented by type of environmental protection activity and include the protection of atmospheric air and addressing climate change issues, wastewater treatment, waste management, etc.

Other types of environmental protection activities include activities related to renewable energy sources, energy-saving technologies, and improving energy efficiency, as well as all types of environmental protection activities that are not classified under other types of environmental protection activities.
