1. Information about the indicator	
Goal	Ensuring access to affordable, reliable, sustainable and modern energy sources for all.
Task	By 2030, ensure universal access to affordable, reliable and modern energy supply.
The indicator	The level of gasification of the population
2. Information about the organization	
Organization	Ministry of Energy of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	The indicator is determined by the ratio of the number of gasified population to the total population of the country.
Basic concepts:	Gasification is a complex of measures aimed at using commercial and (or) liquefied petroleum gas as fuel at housing and communal services, industrial, agricultural and other facilities. (Source: The Law of the Republic of Kazakhstan "On Gas and Gas Supply", information and legal system of regulatory legal acts of the Republic of Kazakhstan "Adilet")
Justification and interpretation	Gasification will reduce emissions of pollutants into the atmosphere, create more comfortable living conditions for the population and generally contribute to improving the environmental situation.
4. Data sources and collection methods	
Data sources	Data from akimats of regions, cities of republican significance, and capitals in the form of "Main criteria for the level of gasification as of January 1 of this year" in January of the year following the reporting one. This form was approved by the Order of the Minister of Oil and Gas No. 172 dated September 25, 2013.
Data collection methods	Based on the data received from the akimats, the authorized body in the field of energy calculates the total level of gasification of the population with natural gas, in percentage terms.
Unit of measure ment	Percent
Periodicity	Annually, by January 20, following the reporting period
5. Calculation method and other methodological considerations	
Calculation method:	The level of gasification of the population is calculated as the number of gasified population divided by the total population of the Republic
Comments and restrictions:	-
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website of the Ministry of Energy of the Republic of Kazakhstan.
The level of disaggregation:	The data is disaggregated by the geographical location of the country

7. Comparability with international data/standards	-
