1. Information about the indicator	
Goal	Promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
Task	By 2030, ensure the development and implementation of strategies to promote sustainable tourism that promotes job creation, the development of local culture and the production of local products
The indicator	GVA, created directly in tourism
2. Information about the organization	
Organization	Bureau of National Statistics of the Agency for Strategic Planning and Reforms of the Republic of Kazakhstan
3. Definitions and concepts	
Definition	For each individual tourism industry, a part of its gross value added (in base prices) is determined, corresponding to the contribution of its final products to the total consumption related to tourism within the country, and these values are summed up by tourism industry and all other sectors of the economy. The summation of all parts of the value added across all sectors of tourism minus the total volume of intermediate consumption as a result is equal to the gross value added generated directly in tourism.
Basic concepts:	The gross value added created directly in tourism is a part of the gross value added created in the tourism industries and in other sectors of the economy directly related to visitor service in accordance with the dynamics of consumption related to tourism within the country.
Justification and interpretation	GVADT reflects the part of the added value created by tourism and other industries that is related to visitor consumption. This indicator is widely used at the national and international levels. This indicator has been formed since 2003. Since 2013, it has been formed in accordance with the international recommendations of the Tourism Satellite Account: Recommended Methodological Framework, 2008 (https://unstats.un.org/unsd/publication/Seriesf/SeriesF_80rev1r.pdf), "International Recommendations on Tourism Statistics, 2008", System of National Accounts, 2008 (https://unstats.un.org/unsd/nationalaccount/docs/SNA2008Russian.pdf) and Methods for the formation of the Tourism Auxiliary Account and calculations of the main indicators of the tourism industry, approved by the Order of the Chairman of the Committee on Statistics of the Ministry of National Economy of the Republic of Kazakhstan dated April 24, 2018 No. 54 (http://adilet.zan.kz/rus/docs/V1800016879).
4. Data sources and collection methods	
Data sources	The sources for the formation of the TSA are: - Data from the "Resources - Usage" tables of the system of national accounts; Industry statistics data: - tourist expenses of resident and non-resident visitors (H-050 Household Survey Questionnaire on travel expenses, H-060 Visitor Survey Questionnaire); - the number of the employed population (1-T Labor Report, T-001 Questionnaire of the sample

	survey of employment); - investments in fixed assets (1-invest Investment Activity Report); - other data; Structural statistics data: - information on the state of fixed assets (11th Report on the state of fixed assets, 2nd Report on the activities of a small enterprise); Departmental and administrative data: - Balance of Payments of the Republic of Kazakhstan, balance of international services of the Republic of Kazakhstan according to the extended classification (National Bank of the Republic of Kazakhstan); -expenses for collective tourist consumption (Committee of the Tourism Industry of the Ministry of Tourism and Sports of the Republic of Kazakhstan).
Data collection methods	The results of national statistical observations are presented from the sectoral departments of the Bureau of National Statistics of the Republic of Kazakhstan ASPR. Departmental and administrative data are provided within the framework of existing joint orders on the exchange of information with government agencies, upon request and from official websites of data sources.
Unit of measure ment	Billion tenge
Periodicity	Annually
5. Calculation method and other methodological considerations	
Calculation method:	For each individual tourism industry, a part of its gross value added (in base prices) is determined, corresponding to the contribution of its final products to the total consumption related to tourism within the country, and these values are summed up by tourism industry and all other sectors of the economy. The sum of all parts of the value added across all tourism sectors minus the total volume of intermediate consumption as a result is equal to the gross value added created directly in tourism.
Comments and restrictions:	The classification of tourist products contains "Typical country-specific tourist goods and services," but no statistical observations are carried out on them. According to the international methodology, "Specific goods and services for a particular country" should account for a significant share of the economic supply and a significant share of tourist spending. TSA data is published after 16 months for the reporting period, depending on the administrative sources used (data from the National Bank of the Republic of Kazakhstan) and statistical data (Tables Resources-Usage).
6. Data availability and disaggregation	
Data availability and gaps:	The data is available on the website stat.gov.kz
The level of disaggregation:	The data on the GVADT is disaggregated by tourism industry.
7. Comparability with international data/standards	It is comparable at the international level, as calculations are carried out in accordance with the methodologies: "System of National Accounts, 2008", "International Recommendations on Tourism Statistics, 2008", "Tourism Satellite Account: recommended methodological framework, 2008".
