S. 2 Introduction-Relevance

The main purpose of the System of National Accounts (hereinafter - SNA) is to provide a comprehensive conceptual framework and accounting structure that could be used to create a macroeconomic database suitable for analyzing and assessing the performance of the economy. The presence of such a database is a prerequisite for the development of a sound and

rational policy and making appropriate decisions.

National wealth is one of the main components of the integrated structure of the SNA.

The relevance of the formation of national wealth is due to the need to use data for economic analysis and forecasting.

The main users are government bodies such as the Ministry of National Economy of the Republic of Kazakhstan, research institutes, international organizations such as the Eurasian Economic Commission, the Interstate Statistical Committee of the Commonwealth of Independent States and others.

S.4.4 Statistical concepts and definitions

The System of National Accounts (SNA) is a logically coherent, harmonious and coherent set of macroeconomic accounts, balance sheets of assets and liabilities, and tables, which is based on a number of internationally agreed concepts, definitions, classifications and accounting rules.

The balance sheet of assets and liabilities is a point-in-time report containing data on the value of assets and liabilities.

The financial and non-financial resources of an institutional unit or sector, reflected in the balance sheet, represent an indicator of economic status, net worth, which is a balancing item. Net worth is defined as the value of all assets owned by an institutional unit or institutional sector minus the value of all of its or its liabilities. For the economy as a whole, the balance sheet shows the total value of non-financial assets and net claims on the rest of the world. This amount is called national wealth.

Basic concepts with corresponding definitions according to SNA 2008:

1) produced non-financial assets - assets that arose as a result of production processes falling within the definition of the boundaries of the sphere of production in the SNA;

2) non-produced non-financial assets - assets that are not the result of production processes;

3) financial assets include all financial claims, stocks or other corporate interests and gold bullion from the monetary authorities.
