### **4. Glossary**

Gross regional product (GRP) is the final result of the production activities of resident producer units in a particular region, over a certain period of time and calculated at market prices.

Gross value added is the value of gross output less the value of intermediate consumption, which serves as an indicator of the contribution to GDP made by individual producers, industries or sectors of the economy.

Gross output - the output of goods and services, representing the total value of goods and services resulting from the production activities of resident units of the national economy in the reporting period.

Intermediate consumption is the value of goods and services that are transformed or completely consumed in the production process.

Contribution - the value of the influence of the percentage change in the indicator on the total value of GDP.

Taxes on products include taxes, the amount of which directly depends on the cost of goods produced and services rendered;

### **5. Methodological notes**

Gross regional product is the value of the final goods and services of a particular region, over a certain period of time. The GRP is calculated using the production method and is the sum of the gross value added of all economic activities and includes net taxes. The sum of the GRP must equal the Gross Domestic Product.
