Share of regions in GDP for 2020

in percents

Brief methodological explanations

Gross domestic product (GDP) is one of the most important indicators of the System of National Accounts, characterizing the final result of the production activities of resident economic units. GDP can be calculated by three methods that correspond to the various stages of reproduction — the production method, the income method, and the end-use method.

Gross domestic product at the production stage is obtained by summing the gross value added by industry. Gross domestic product is calculated at market prices, that is, it includes net taxes on products. The term «net» means that taxes are shown net of related subsidies.

Gross value added is calculated at the industry level as the difference between the output of goods and services and intermediate consumption. The term «gross» indicates that the indicator includes the value of fixed capital consumed in the production process.

Gross Regional Product (GRP) - the final result of the production activities of resident producer units of a particular region over a specified period of time and calculated at market prices.

Index of physical volume (IPV) is a relative indicator characterizing the change in production volumes in the compared periods. It is calculated by dividing the cost of a certain indicator in the current period, estimated at the prices of the base period, by its value in the base period.

Deflator - an indicator that characterizes the average change in prices in the economy over a certain period.

Do you need more information?

All the main indicators of the socio-economic development of the republic can be found on the Internet-resource of the Bureau of National statistics of the Agency for Strategic planning and reforms of the Republic of Kazakhstan www.stat.gov.kz.

The statistical compilation «National Accounts of the Republic of Kazakhstan» has been released and posted on the Bureau's Internet-resource, under the heading «Official statistics»/«Publications»/«Statistical collections». The collection presents the system of national accounts of Kazakhstan, gross domestic product, calculated by three methods: production method, end-use method and income method, real GDP growth indices, GDP deflators, gross regional product.

Gross domestic product

Do you know that...

- According to the International Monetary Fund rating, Kazakhstan at the end of 2020 ranks 40th in terms of the nominal value of GDP, calculated at purchasing power parity
- For 2020, the city of Almaty holds the largest share in the structure of gross regional product (GRP) - 19.1%
- High GRP growth rates for 2020 are observed in the Turkistan (4.9%), Kostanai (3.0%) and Akmola regions (2.7%)
